

SH1 s

Be a next standard!

SH1

Powerful and A

SH1 series , setting the new global standard

1. A High Performance drive for the most demanding

A variety of motors (IM/PM) can be adjustable to drive.
The most stable operation ever.

2. Easy access to all the functionality

Innovative performance and characteristics for dedicated pursuit of user friendliness

3. Versatility through multi mode operation, to meet your specific application needs

SH1 meet a wide range of needs by achieving variety of functions necessary for drive systems.

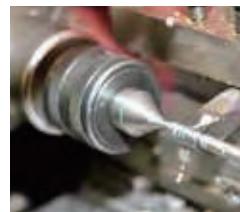

Corresponds to variety of applications.

Fan

Pump

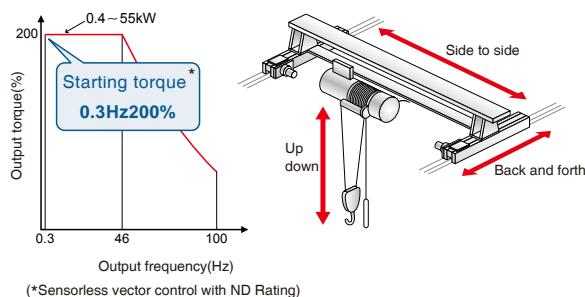

A High Performance drive for the most demanding of applications

"Smooth operation" in critical and demanding applications, such as vertical lift

New

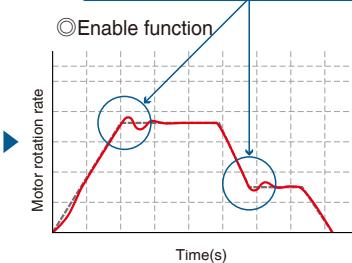

version UP

High starting torque at low speed range while in control of heavy loads. (ND rating).
[Sensor less vector control(SLV)]
[OHZ sensor less vector control]

Decreasing overshoot and undershoot contributes to smooth and stabilized operation with reduced load shock.
[Gain mapping Function]

Reduction of swinging load, leading to better operational control and productivity.

Cog-less motor operation for crane, lift, transport, etc.

Trip-less operation for better productivity.

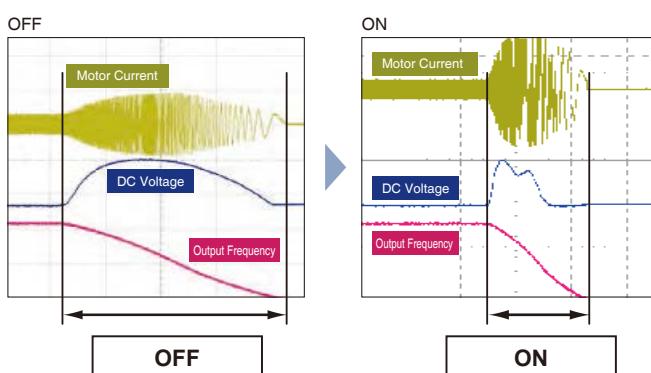

Reduce trips on acceleration and deceleration

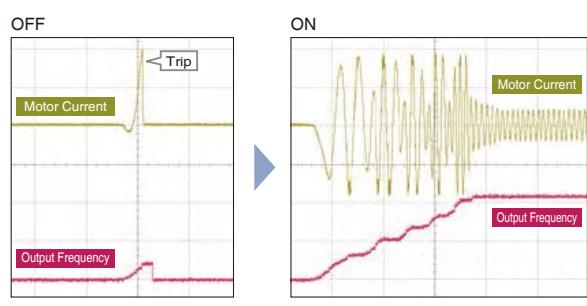

version UP

Automatic speed adjustment manages ideal acceleration / deceleration speed to reduce the trip possibility from over current, over voltage, and impact load.

Over magnetize function

Over-current suppress function

*Turn off this function for lifting equipment.

*Image of the output frequency and output current.

version UP

Improvement or added item.

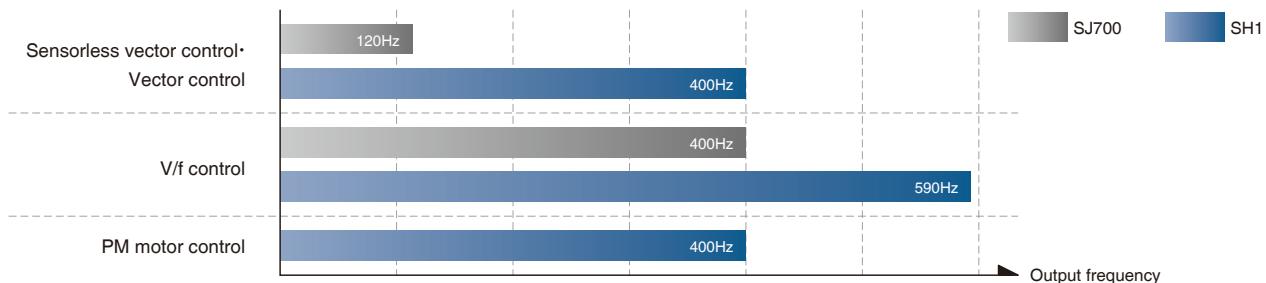

EzSQEzSQ application case.
refer to P17-18 for details.**PM motor**

PM motor specific function.

"High speed rotation" for non-traditional applications

version UP**PM motor**

590Hz at the maximum operation is available for precise metal processing. For PM motor, also up to 400Hz. (actual output frequency depends on motor)

For metal tooling

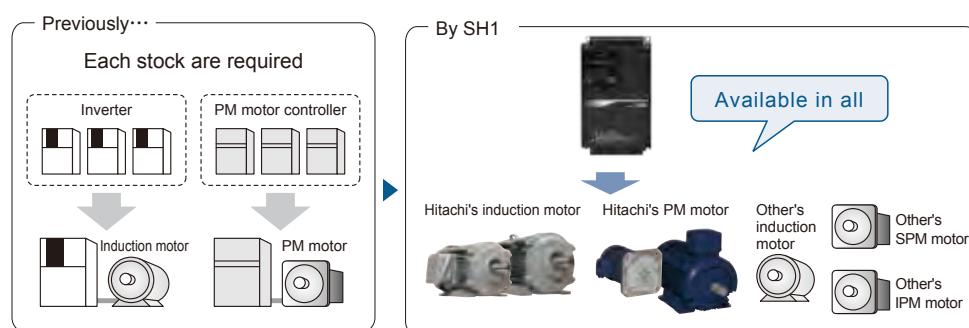

High speed rotation contributes the high quality of metal processing.

Save on spare control costs

New Feature

Our multi-mode inverter can control both your induction motor, or permanent magnet AC motor. All while offering programmable current limit to protect from demagnetization of the PM motor.

Optimize performance. [Auto-tuning function]

Complicated tuning procedures are avoided through the use of our auto-tuning function to optimize motor performance.

For long time operation (fan, pumps)

Significant energy savings can be obtained in comparison to an induction motor, even in 24 hours 365 days operation.

A High Performance drive for the most demanding of applications

Complicated PID process control

New Feature
version UP

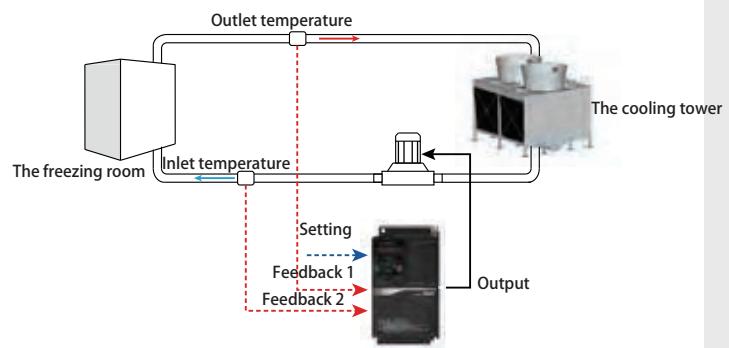

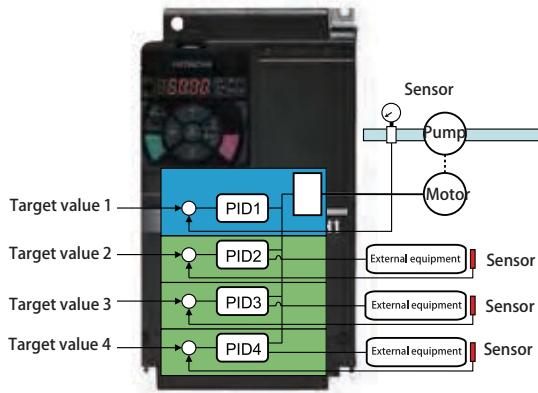

4-path independent PID control is introduced to achieve complex process control

- 4 path PID can be switched to use through the terminal
- When the motor control is not required, it can be freely used as the external PID controller. No additional PID controller is needed to save cost and space
- PID cascade control can be performed

- PID velocity stack
- PID target value and feedback value calculation
- Pressure boost dormancy/wake
- PID soft start

Central air-conditioning cooling water thermostatic difference control

The feedback value calculation function easily achieves the thermostatic difference of water through the inlet and outlet of central air-conditioner.

Highly accurate position control

version UP

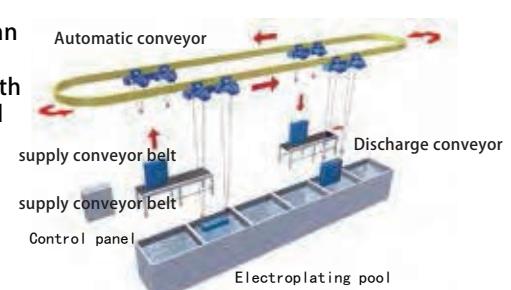

Optimized absolute position control function which achieves accurate operation

The inverter, operated together with encoder-equipped general motor, can realize highly accurate absolute position control.

When applied in a conveyor, accurate position control can be achieved with low cost. Based on the four motion parameters (position command, speed command, acceleration command, deceleration command), the inverter moves an object from original position A to target position B, and after that it keeps the servo lock status.

- Position memory at power off
- Preset of position parameter
- Position learn function
- 16 digit position control

Automatic conveyor winch system

Forcible operation at emergency

New Feature

The inverter will forcibly operate the fan and water pump when fire disaster happens in tunnels, mines or buildings, which will fully ensure the safety of life and property.

When the function is activated, it will enter forcible operation mode according to preset direction and speed. It will restart after inverter trip. Once the inverter fails to work, it will switch to bypass operation.

Accessibility

Easy access to all the functionality

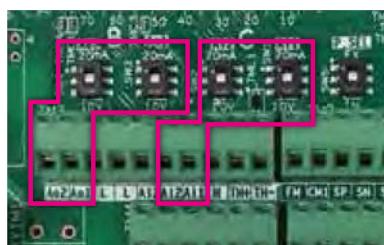

Various convenient features.

Control circuit terminal designed for easy wiring

New Feature

0/10V and 4 to 20mA inputs and as well as output are easily selected via DIP switch.

- 2 analog inputs (3inputs in total).
- 2 analog outputs.

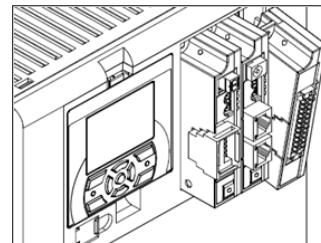

Modbus communication is standard. 2 communication terminals provided for Modbus communication as standard.

Daisy chain wiring of RS-485 is easy.

Easy customize with "Slot-in" option cassette

3 option slots

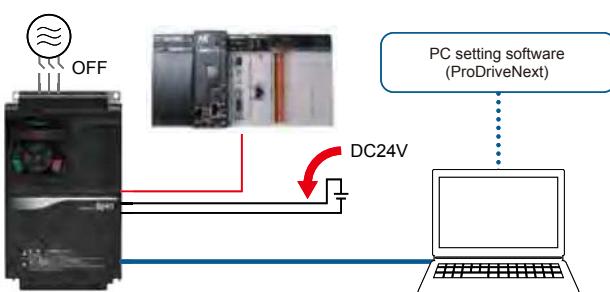

Programming ease through the use of 24 VDC to power up inverter CPU memory

New Feature

Normal power supply (R0, T0) to CPU. Also possible to utilize an external 24VDC control power supply.

Parameter setting is also possible with the main power is turned off. Thus saving time and effort.

Easy customize by PC configuration software

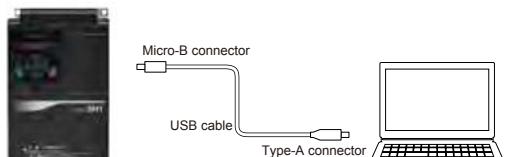

version UP

PC setting software.

Using the PC configuration software (ProDriveNext), parameter setting, monitor, and diagnosis can be easily achieved.

Easy customization to your own inverter.

Specific behavior can be easily programmed into the inverter by BASIC like program.

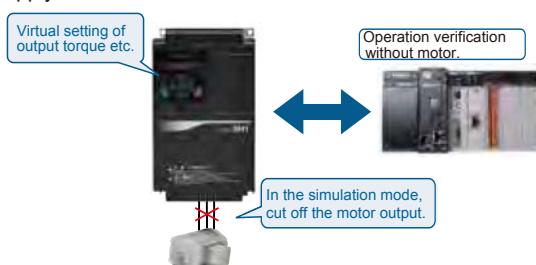

Control Simulation Logic operation without direct motor output

New Feature

The simulation mode makes it easier to verify connection with the system control equipment.

In the simulation mode, only the motor output is shut off while all inverter functions are enabled. The simulation mode can also be active by using an external 24VDC power supply.

Quick diagnose during failure

New Feature

The SH1 automatically stores internal data in retentive memory.

Users can upload the data to a PC for review and diagnosis of issue.

Accessibility

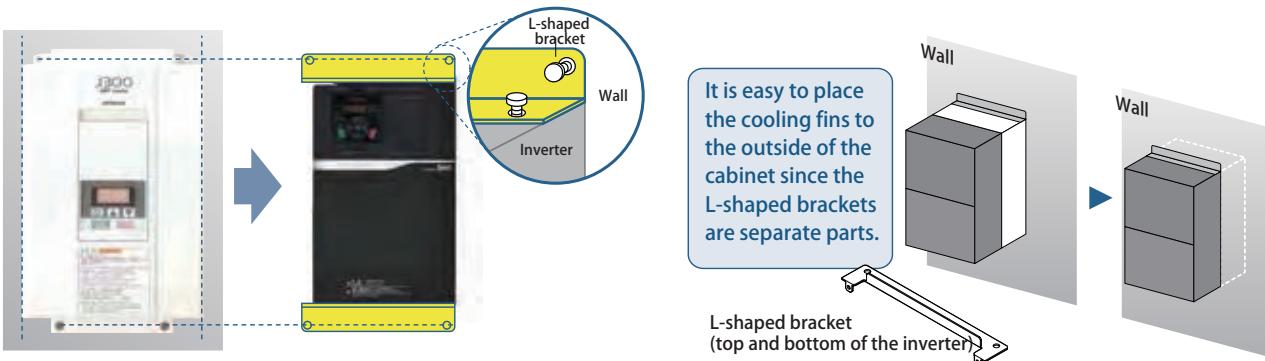

Easy access to all the functionality

Various convenient features.

Direct field replacement, when needed

New Feature

Panel mounting portion is supplied as separate part. (SH1-00175-H or more)
Even if its body size is different, it is possible to correspond in flexible ways.

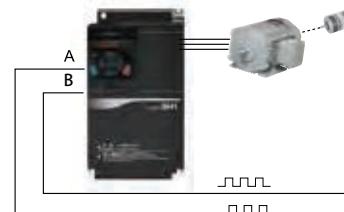

High speed pulse train input

New Feature

The inverter is equipped with 2 way high speed pulse train input port (maximum 32 kpps)

Not only used as input of pulse train, but also as input port of feedback signal
When operating together with encoder-equipped general motor, the inverter
can achieve highly accurate speed control, torque control and position control,
which largely reduce the cost of the system.

Cooling fan and the main circuit capacitor is designed for 10 years life.

(Note: The ambient temperature is 40 °C (annual average).
Without corrosive gas, flammable gas, oil mist and dust.)
The above design life is a calculated value, not a guaranteed value.
Output current at the calculation is 80% of the rated current of the inverter.

Monitor lifetime prediction functions.

Electrolytic capacitor of control circuit
(internal estimation calculation).

Cooling fan.

Environment compatibility

version UP

Independent cooling structure

The cooling structure is separated from electric structure, which prevents from dust, oil and other bad working environment, so as to ensure sustainable operation.

Promoted treatment of inner coating

Nickel-plated treatment of the cooper bus-bar enhances the compatibility to corrosive gas and oil mist.

Built-in noise filters corresponding to the European EMC Directive. (IEC61800-3 2nd Environment Category C3)

Since complies with the RoHS, Environmental considerations also sufficient.

EMC directive:EN 61800-3:2004/
A1:2012 LVD:EN 61800-5-1:2007

EzSQ

EzSQ (programming function for customization)

25							

The program is easy to create with available condition branches and timer settings.

Hitachi's EzSQ makes it possible to achieve a level of control that cannot be realized by a general purpose inverter. Providing a unique solution and added value through cost savings and improved performance.

Simultaneous execution task in SH1 extended to 5tasks/2ms

The program is created on a PC setting software (ProDriveNext).
It is easy to programming because similar BASIC!

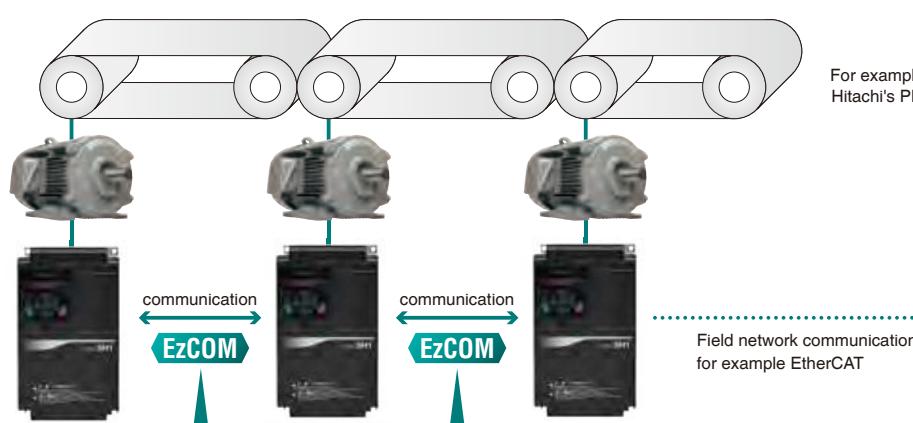

EzCOM

Inverter-to-Inverter communication

version
UP

SH1 makes it possible to have Inverter-to-Inverter communication without a PLC or PC. [EzCOM function]

It is easy to build a small coarsely synchronized system using multiple inverters. Since SH1 can use both of EzCOM and external communication option cassette, you can create a system that does not require complicated control components. (The maximum number of EzCOM units is 8 inverters)

For example,
Hitachi's PLC

Field network communication,
for example EtherCAT

Available together,
EzCOM communication
and field network
communication options.

By simple wiring and easy parameter settings, the synchronous operation can be achieved without the host controller (Resulting in cost and wiring savings).

Flexibility

Versatility through multi mode operation, to meet your specific application needs.

SH1 meet a wide range of needs by achieving variety of functions

"Save space and save cost" by multi rating function!(specially used)

version
UP
PM
motor

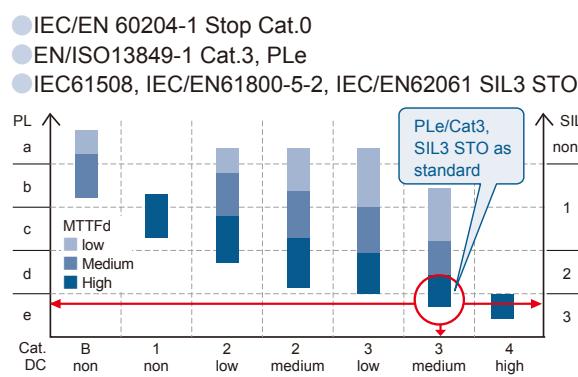

Triple-rated for Induction motor for various applications is selectable. Dual-rated for PM motor control.
Multiple rating helps to save space and cost.

Rating	VLD(Very Light Load)	LD(Light Load)	ND(Normal Load)
Induction motor	←	→	
PM motor		←	→
Applications	Fan·Pump	Metal tooling·Conveyer	Crane·Mixer
Overload current rating	110% 60sec, 120% 3sec	120% 60sec, 150% 3sec	150% 60sec, 200% 3sec
Example 400V/18.5kW Max rated output current	47.0A 	43.0A 	39.0A 

Certified "functional safety" international standard(specially models)

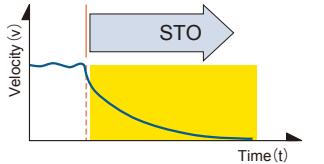

Certified functional safety. (Certification in process)

Third party certified electrical safety,
In compliance to IEC61508, IEC/EN61800-5-2 SIL3 STO,
available as standard.

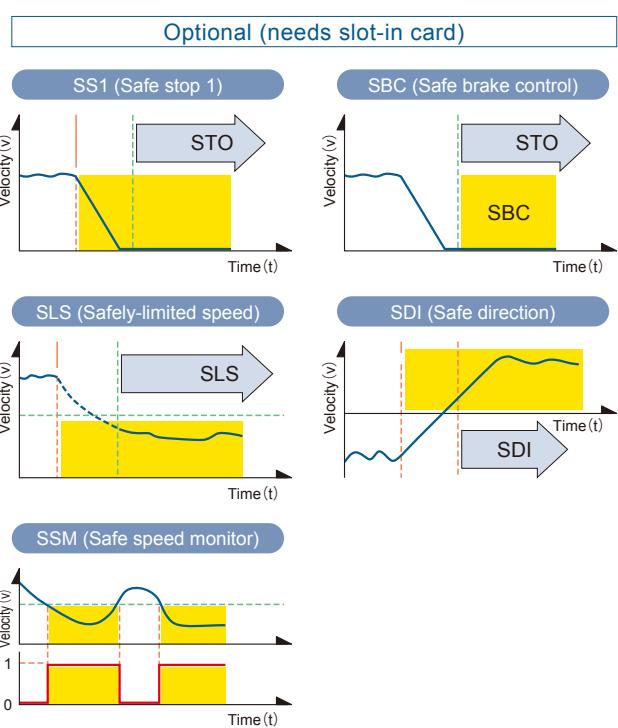

Standard (without option cassette)

STO (Safe torque off)

SS1, SLS and others are available with slot-in option cassette. (In design phase)

version
UP

IoT applied

Remote control of industrial equipment, OA system information sharing, general management of different information facilities.

RS-485 communication terminal

Modbus-RTU, The maximum baud rate is 115.2kbps.

(Modbus is the registered trademark of Modicon Inc. EtherCAT is the registered trademark and patented technology approved by Beckhoff Automation GmbH. Other corporation name and product name is the trademark and registered trademark of related companies and organizations)

Intuitive,easy-to-use LED operator is standard

version
UP

Operation Panel

Braking circuit is built-in. Further "Space and Cost saving"

version
UP

The regenerative braking circuit is built-in, therefore a separate regenerative braking unit (BRD) is not necessary. Saving space and cost.

Applicable models
0.75 to 55kW
(45kW and 55kW is the order)

PC setting Software

Hitachi's ProDriveNext Software

Easy configuration, such as start/stop and fault diagnosis.

ProDriveNext(PC setting software)

ProDriveNext supports various functions.

Easy Setup & Easy data management.
Parameter comparison is also enhanced.

Easy connection via USB

Ethernet is also available (optional)

Type-A connector
Micro-B connector
USB cable

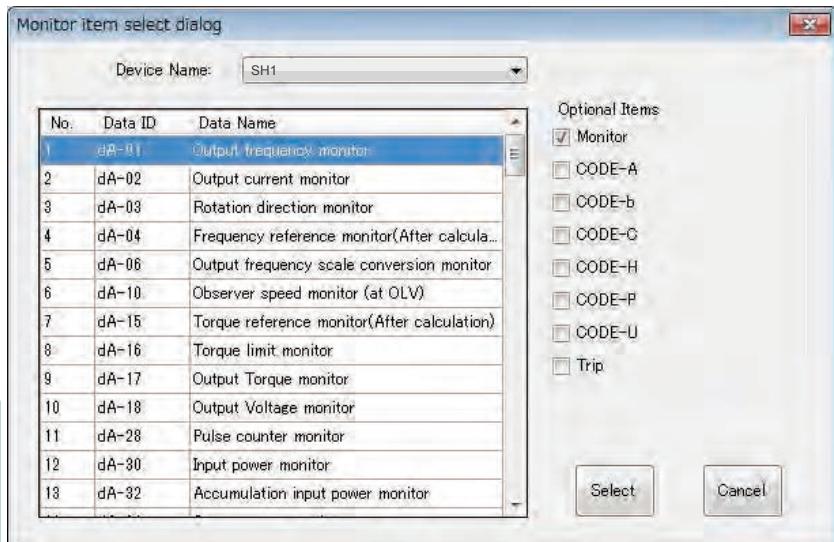

Monitor Function.

All display parameters can be monitored.

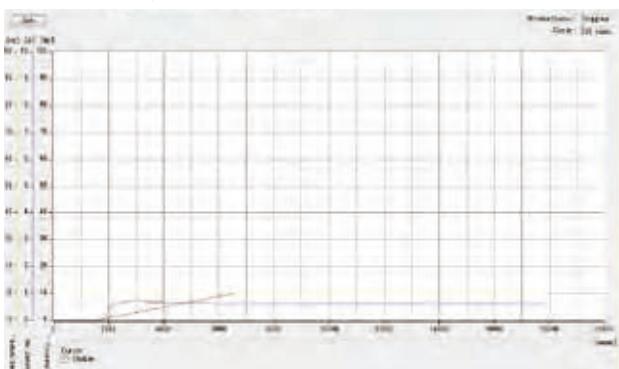

Monitor display format can be uniquely customized by selecting the required items, and can be displayed in a tabular or graphical format.

Data Trace function support an failure diagnosis.

By frequency reached, alarm or other signal trigger, the internal data of inverter is stored in real-time in the internal memory*.

Operation adjustment and failure analysis becomes more quickly.

(*This memory data is cleared at power shutdown.)

Hitachi's EzSQ makes it possible to achieve a level of control that cannot be realized by a general purpose inverter. Providing a unique solution and added value through cost savings and improved performance. Simultaneous execution task in SH1 extended to 5tasks/2ms. (SJ700 is 1task/2ms.)

Hitachi inverters are used in a wide variety of industries because

Crane, Lift, Automatic warehouse

EzSQ

- Provides smooth drive control even for heavy weights.

Provide stable drive control even for the heavy weights (such as winding of the cranes) by high start-up torque (0.3Hz, 200%).

*Note Hitachi Induction motor 4P (ND load/Sensor-less vector control)

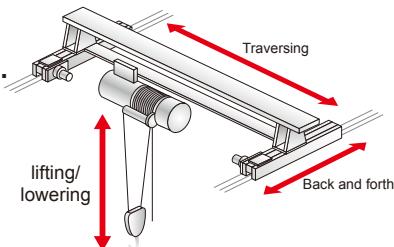

- Reduce the shock such as swing load by multi setting speed response gain.

Gain mapping function provides a vibration reduction and stable operation. It will be also effective in the tact time reduction.

- Space-saving and cost-down by the EzSQ(programming function).

By using EzSQ, it is possible to reduce components by eliminating the host controller for the drive, thus saving-space and cost.

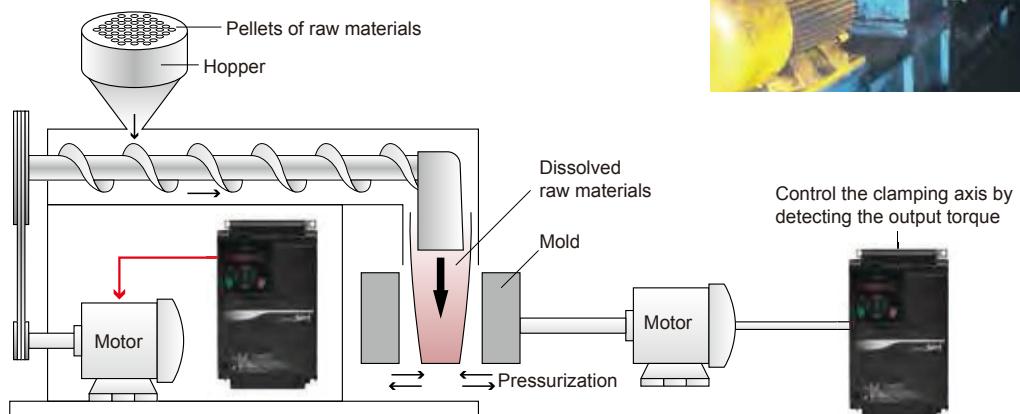

Recommended function

- Sensorless vector control
- Gain mapping function
- EzSQ(programming function)

Injection molding machine

- Torque control can be applied to the injection molding machine.

"Overload warning signal" and "Over torque signal" can apply the operation timing of the injection and mold clamping axis.

Recommended function

- Torque control
- Torque limit function
- Overload signal
- Over torque signal
- Overload restriction function

of its high efficiency and high quality.

Winder

Utilizing Gain Control.

When you allow the speed response gain to be variable by the output frequency band, the drive is more stable.

This is suitable for winder and re-winder applications.

In Winding machine applications highly precise rotation is required.

For closed-Loop application optional feedback board is required.

Recommended function

- Vector control (feedback option board required)
- Gain mapping function
- Torque control

Grinder

EzSQ PM
motor

Miniaturization by utilizing a PM motor.

Hitachi supports PM motor control.

Further support to high-quality machining applications.

Maximum output frequency is 590Hz (induction motor) and 400Hz (PM motor).

EzSQ expands the possibility for a wide variety of simpler applications.

By utilizing the EzSQ program operation functionality, The drive logic (EzSQ) can be developed and edited to optimize the motor operation based on conditional or logical programming to enhance and increase production.

In addition, the programming functionality can reduce cost, function, and panel space as well as some of the logic allocated to the controller and peripheral devices.

e. g. Depend on application desired operation, the logic program (EzSQ) can control many of the operational parameters, such as frequency, overload level, overload signals and others.

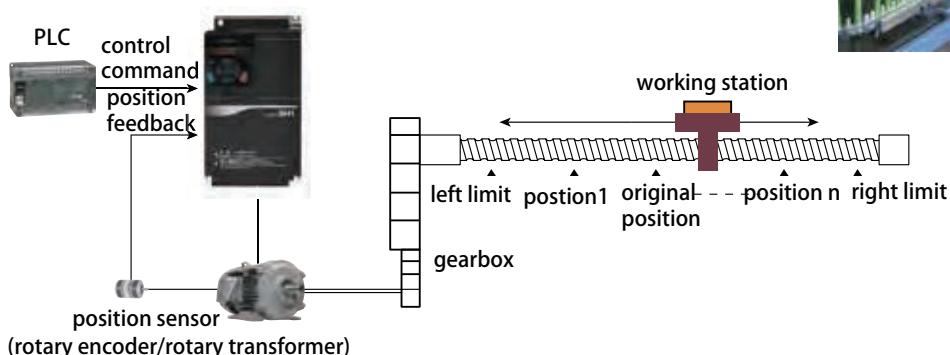

Recommended function

- PM motor drive
- EzSQ(programming function)

The SH1 inverter is applicable in a wide variety of applications.

Positioning control of lifting mechanism and working station

- The inverter together with encoder-equipped motor can perform position control in applications such as lift machinery, metal processing machinery and so on. No additional encoder feedback board is needed to achieve cost competitive system.
- EzSQ program achieves auto-positioning operation.

Recommended function

- Position control
- Return to original position

- Position learning
- EzSQ(programming function)

- Motor gear ratio

Air blower, water pump

- PM motor is used to promote energy saving
- Energy saving mode highly promotes the working efficiency and saves energy
- PID and pressurized sleep/wake help achieve stable and high efficient operation
- EzSQ program makes the whole system simple to operate and largely reduces the cost

Recommended function

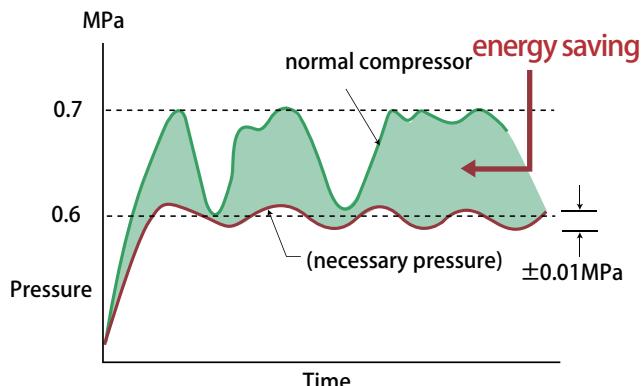

- PM motor drive
- PID control
- Automatic energy-saving function
- EzSQ

such as fan, pump and compressor.

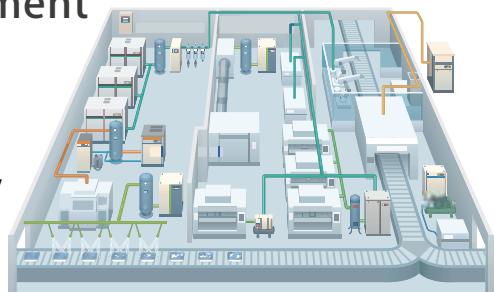

more useful features of each application!

Air compressor in the industrial equipment

- The inverter controlled compressor can realize highly accurate pressure control, which is more stable and energy efficient.
- PM motor is used to further promote energy efficiency

*Hitachi OSP-11~160kW testing curve

Recommended function

● PM motor

● Modbus

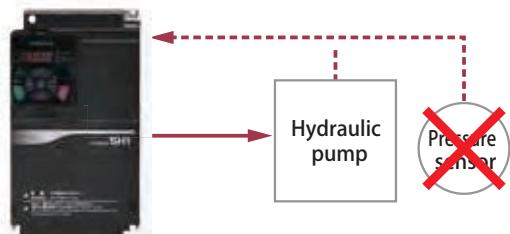

● PID control

Hydraulic pump

EzSQ

- Energy-saving achieved by EzSQ (programming function).

By increasing the rotation speed when pressure is necessary, and reducing the rotational speed during standby, the SJ-P1 will optimize energy consumption. In addition, EzSQ can utilize signals from external sources such as a pressure sensor and/or a relay circuit. Therefore, cost reduction and space saving can be achieved.

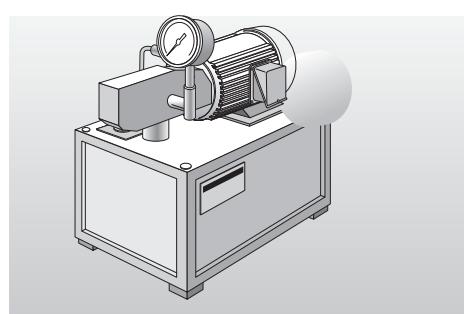

□ Example of the results of the hydraulic pump energy-saving test

Inverter operation
EzSQ (programming function)

Example of the results

Reduction of 45%
of the cumulative power!

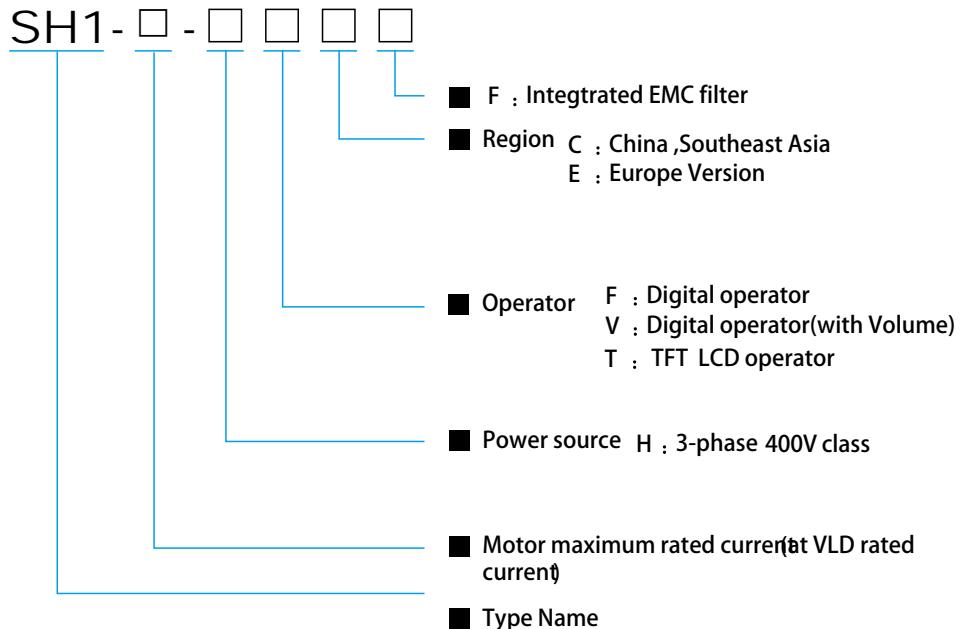

Recommended function

● Multiple rating ● PID control ● PM motor drive
● Sensorless vector control ● EzSQ(programming function)

*1: The applicable motor refers to Hitachi standard 3-phase motor (4-pole). To use other motors, be sure to prevent the rated motor current (50Hz) from exceeding the rated output current of the inverter.
 *2: Electronic thermal protection is valid in accordance to derating. *3: In order to comply with the Low Voltage Directive (LVD), it must be connected to a neutral grounding supply. 200V class: -Pollution degree 2 -Overvoltage category 3. 400V class: -Pollution degree 2 -Overvoltage category 3 (In the case the input supply is 380 to 460Vac) -Overvoltage category 2 (If the input supply is 460Vac or more).
 *4: The power supply capacity is the value of the output rated current at 220V / 440V. The impedance at the supply side may be affected by the wiring, breaker, input reactor, etc. *5: Carrier frequency may be limited in the range according to the use of drive. *6: The values for the sensorless vector control are assigned according to the values in the ND rating in the Hitachi standard motor table. Torque characteristics may vary by the control system and the motor in use. *7: Usually, an external regenerative braking is necessary. By your order it is possible to include the built-in braking circuit. By attaching the braking resistor the regenerative braking unit is no longer required.

Common specifications

Items		General Specifications	
PWM system		Sine-wave PWM system	
Output frequency range (*1)		0.00 to 590.00Hz	
Frequency accuracy		For the highest frequency, digital $\pm 0.01\%$, analogue $\pm 0.2\%$ ($25 \pm 10^\circ C$)	
Frequency resolution		Digital: 0.01Hz, Analogue: Max. frequency / 4000 (Ai1 terminal / Ai2 terminal: 12 bit / 0 to +10V or 0 to +20 mA, Ai3 terminal: 12 bit / -10 to +10V)	
Control system (*2)	IM	V/f control (constant torque / reduced torque / free), Automatic boost control, V/f control with encoder (constant torque / reduced torque / free), Automatic boost control with encoder, Cascade type sensorless vector control, 0Hz sensorless vector control, Cascade type vector control with encoder (position and torque).	
	SM/PMM	Methods of synchronous startup for vectorless smart control / Methods of IVMS startup for vectorless smart control	
Speed fluctuation (*3)		$\pm 0.5\%$ (sensorless vector control)	
Acceleration/deceleration time		0.00 to 3600.00s (Linear, S-curve, U-curve, Inverted-U-curve, EL-S-curve)	
Display		Output frequency, Output current, output torque, trip history, input/output terminal function, input/output power (*4), PN voltage, etc.	
Start functions		DC braking after the start, matching frequency after the start, active frequency matching start, Low-voltage start, retry restart.	
Stop functions		After free run stop, deceleration stop; DC braking or external DC braking operation (Braking force, time, adjustment of operation speed)	
Stall prevention function		Overload limit function, overcurrent suppression, overvoltage suppression function	
Protection functions (*5)		Overcurrent error, overload error, brake resistor overload, overvoltage error, memory error, undervoltage error, current detector error, CPU error, external trip error, USP error, ground error, supply overvoltage error, power loss error, temperature detector error, Cooling-fan rotation speed decrease, temperature error, phase input error, IGBT error, phase output error, thermistor error, brake error, low-speed range overload error, inverter overload, RS485 communication error, RTC error etc.	
Other functions		V/f free setting (7 points), upper and lower frequency limit, frequency jump, curve acceleration and deceleration, manual torque boost, energy-saving operation, analogue output adjustment, minimum speed, carrier frequency adjustment, motor electronic thermal function (free is possible), inverter thermal function, external start-end (speed and rate), frequency input selection, trip retry, restart stop, various signal output, initialization setting, PID control, auto-decel at shut-off, brake control function, commercial switching function, auto-tuning (on/offline) etc.	
Input	Frequency setting	Panel	up, down, left and right keys to the set parameter.
		External signal (*6)	Ai1 / Ai2 terminal (Current and Voltage is able to switched.) 0 to 10Vdc (input impedance: 10k Ω) / 0 to 20mA (input impedance: 100 Ω)
		Ai3 terminal	-10 to +10Vdc (input impedance: 10k Ω)
		Multi-speed terminal	16multi-speed (With the use of the intelligent input terminal)
	Forward / reverse Start / stop	Pulse train-input	Maximum 32 kHz x2
		Panel	By RUN / Stop key (With the set parameter, forward / reverse can be switched)
		External signal	Forward (FW) / Reverse (RV) / 3-wire input allowed (STA, STP, FR) (When input terminal functions are assigned)
		External port	RS485 serial communication (Protocol: Modbus-RTU, Maximum: 115.2kbps)
	Intelligent input terminals	11 terminals (A or B terminal accept a pulse train)	FW (Forward rotation) / RV (Reverse rotation), CF1 to 4 (Multi-speed 1 to 4), SF1 to 7 (Multi-speed bit 1 to 7), ADD (Trigger for frequency addition), SCHG (Command change), STA (3-wire start) / STP (3-wire stop) / FR (Forward / reverse by 3-wire), AHD (Analogue command holding, FUP (Remote control up) / FDN (Remote control down), UDC (Remote data clearance), F-OP (Forcible operation), SET (2nd-motor), RS (Reset), JG (Jogging), DB (External DC braking), 2CH (2-stage acc / decel), FRS (Free-run stop), EXT (External trip), USP (Unattended start protection), CS (Commercial power supply switching), SFT (Software lock), BOK (Braking confirmation), OLR (Overload restriction selection), KHC (Accumulated input power clear), OKHC (Accumulated input), PID (PID1 disable), PIDC (PID1 integration reset), PID2 (PID2 disable), PIDC2 (PID2 integration reset), SVC1 to 4 (PID1 multistage target value 1 to 4), PRO (PID gain change), PIO1 (PID output change), SLP (SLEEP trigger) / WAKE (WAKE trigger), TL (Enable torque limit), TRQ1/2 (Torque limit 1/2), PPI (P/PI switching), CAS (Control gain switching), FOC (Forcing), ATR (Enable torque command input), TBS (Enable torque bias), LAC (Acceleration / Deceleration cancellation), M1 to 11 (General-purpose input1 to 11), PCC (Pulse counter clearance), ECOM (EZCOM activation), PRG (EZSQ programme start), HLD (Acc / decel stop), REN (Motion enable signal), DISP (Display lock), PLA (Pulse train input A), PLB (Pulse train input B), DTR (Data trace start), DISP (Display lock), SON (servo on), ORT (orientation), PCLR (Clearance of position deviation), STAT (pulse train position command input enable), PUP (Position bias (ADD)), PDN (Position bias (SUB)), CP1 to 4 (Multistage position settings selection 1 to 4), ORL (Limit signal of Homing function), ORG (Start signal of Homing function), FOT (Forward Over Travel), ROT (Reserve Over Travel), SPD (speed / position switching), PSET (Position data presetting).
		Backup supply terminal	P+ / P-: DC24V input (Input allowable voltage: 24V $\pm 10\%$)
		Thermistor input terminal	1 terminal (PTC / NTC resistor allowed)
		Intelligent output terminals	Transistor output terminal 5, 1c contact relay 1 point
		Intelligent alarm relay (1c)	RUN (While in run), FA1 to 5 (Reached frequency signal), IRDY (Inverter ready), FWR (Forward rotation), RVR (Reverse rotation), FREF (panel frequency reference), REF (panel motion operation), SETM (2nd-motor selected), AL (Alarm signal), MJA (Major failure signal), OTQ (Over-torque), IP (Power loss), UV (Undervoltage), TRQ (Torque limited), IPS (Decel. Power loss), RNT (RUN time exceeded), ONT (On time exceeded), THM (Motor electronic thermal warning), THC (Electronic thermal warning), WAC (Capacitor life warning), WAF (Cooling-fan life warning), FR (Operation signal), OHF (heat sink overheat warning), LOC / LOC2 (Low-current indication signal), OL / OL2 (Overload warning 1/2), BRK (Brake release), BER (Brake error), ZS (0Hz detection signal), OD / OD2 (Output deviation for PID control), FBV / FBV2 (PID feedback comparison), NDc (Communication disconnection), Ai1Dc / Ai2Dc / Ai3Dc (Analogue Ai1 / Ai2 / Ai3 disconnection), WCA1 / WCA2 / WCA3 (Window comparator Ai1 / Ai2 / Ai3), LOG1 to 7 (logical operation result 1 to 7), MO1 to 7 (General-output 1 to 7), OVS (Over-Voltage power supply), PCMP (Pulse counter compare output), WFT (Trace function waiting for trigger), TRA (Trace function data logging), PDD (Position deviation over), POK (Positioning completed), etc.
	Output terminal monitor (*7)	The data of the monitor can be selected by the parameter of the output.	
EMC filter activation (*8)		EMC filter can be activated (method to switch bares)	
PC external access		USB Micro-B	
Environment	Ambient temperature (*9)	-10 to 50°C (ND), -10 to 45°C (LD), -10 to 40°C (VLD)	
	Storage temperature(*10)	-20 to 65°C	
	Level of humidity	20 to 90%RH (No condensation allowed)	
	Vibration tolerance (*11)	SH1-00041-H to SH1-00620H	
	Installation Place (*12)	More than SH1-00770-H	
Components life span(*13)		Main circuit smoothing capacitors is 10 years. / Cooling-fan is 10 years.	
Conformity standars		CE marking(EN 61800-3:2004/A1:2012, EN 61800-5-1:2007)	
Optional slots		3 ports	
Option	Input / ouput	Analog I/O (available soon)	
	Communication	Ethernet (Modbus TCP), EtherCAT, PROFIBUS-DP, PROFINET(available soon)	
	Feedback	Line driver input (RS422)	
Other optional components		Braking resistor, AC reactor, noise filter, operator cable, harmonics suppression unit, noise filter, LCRfilter, analog panel, regenerative braking unit, PC software ProdriveNext, Screw type terminal block(P1-TM2)	

*1: To operate the motor beyond 50/60Hz, please consult with the motor manufacturer about the maximum allowable rotation speed. *2: If the setting of the motor constant is not appropriate, there is a case when the starting torque is not sufficient or unstable. *3: Speed fluctuation will vary depending on your system and the motor of the use environment. Please contact us for more information.

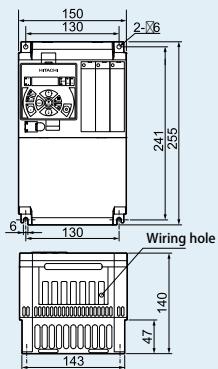

*4: Both Input power and the output power are reference (not actual) value. Not suitable for calculations for such as the actual efficiency. *5: IGBT error [E030] also occurs by IGBT damage not only by short-circuit protection. Depending on the operating status of the inverter, Overcurrent error [E001] occurs instead of the IGBT error [E030]. *6: The frequency command is the maximum frequency at 9.8V for input voltage 0 to 10Vdc, or at 19.8 mA for input current 4 to 20 mA. Characteristic change is adjusted by using external start-end function. *7: The analogue voltage and analogue current monitor are estimated outputs of the analogue meter connection. Maximum output value might deviate slightly from 10V or 20 mA by variation of the analogue output circuit. If you want to change the characteristics, adjust the Ao1 and Ao2 adjustment functions. There is monitor data that cannot be part of the output. *8: When the EMC filter is enabled, please connect to the power supply with neutral grounding. Otherwise, it may increase leakage current. *9: Derating is set in accordance to carrier frequency. *10: Storage temperature is the temperature during transport.

*11: In accordance with the test methods of JIS C 60068-2-6: 2010 (IEC 60068-2-6:2007). *12: In case of utilization at an altitude of 1000 m or more, take into account that the atmospheric pressure is reduced by 1% for every 100 m up. Please apply a derating of a 1% from the rated current every 100 m. Conduct and evaluation and contact us if you plan on using it above 2500 m.

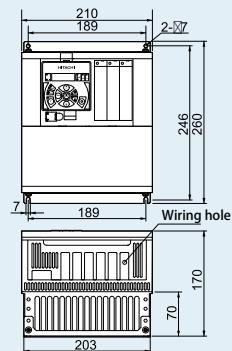

*13: The ambient temperature is 40 °C (annual average).Without corrosive gas, flammable gas, oil mist and dust.)The above design life is a calculated value, not a guaranteed value. Output current at the calculation is 80% of the rated current of the inverter.

Connecting Diagram

Note1: Common to each terminal varies.

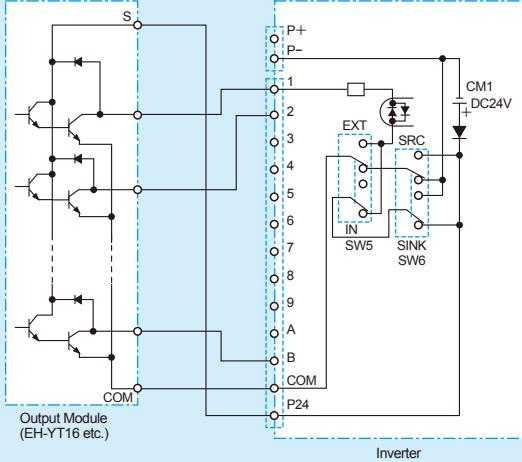

Note2: Disconnect J51 when to supply R0-T0 separately. UV error is issued when main supply is off while in operation.

Connecting to PLC

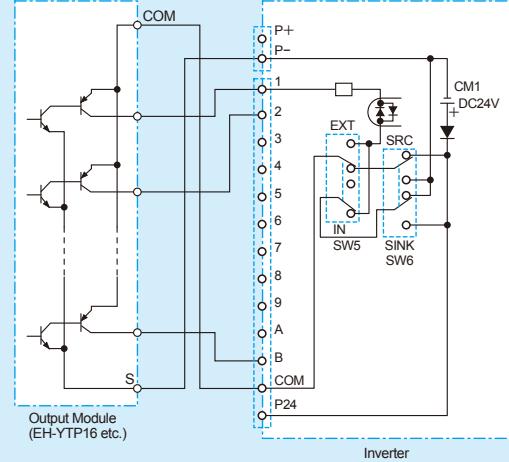

• Connection with Input Terminals

1. Using Internal Power Supply of The Inverter

(1) Sink type logic

(2) Source type logic

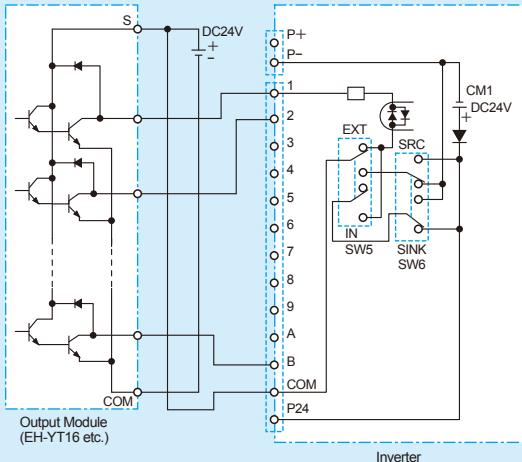

- When using internal power supply of the inverter, the SW5 to "IN".
- When connecting sink type module, the SW6 to "SINK".

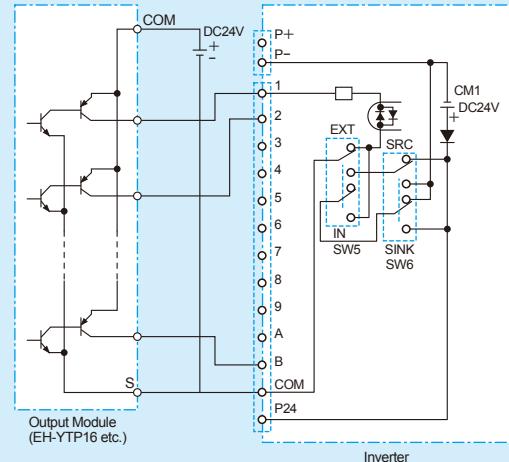

- When using internal power supply of the inverter, the SW5 to "IN".
- When connecting source type module, the SW6 to "SRC".

2. Using External Power Supply

(1) Sink type logic

(2) Source type logic

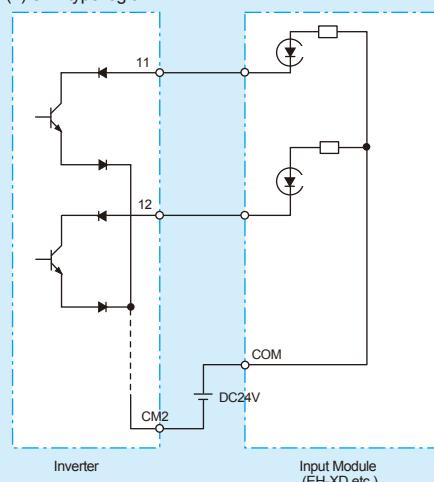

- When using external power supply, the SW5 to "EXT".
- When connecting sink type module, the SW6 to "SINK".

- When using external power supply, the SW5 to "EXT".
- When connecting source type module, the SW6 to "SRC".

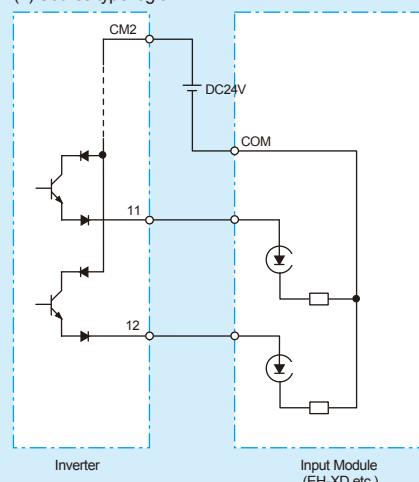

(Note: Be sure to turn on the inverter after turning on the PLC and its external power source to prevent the parameters in the inverter from being modified.)

• Connection with Output Terminals

(1) Sink type logic

(2) Source type logic

Terminals

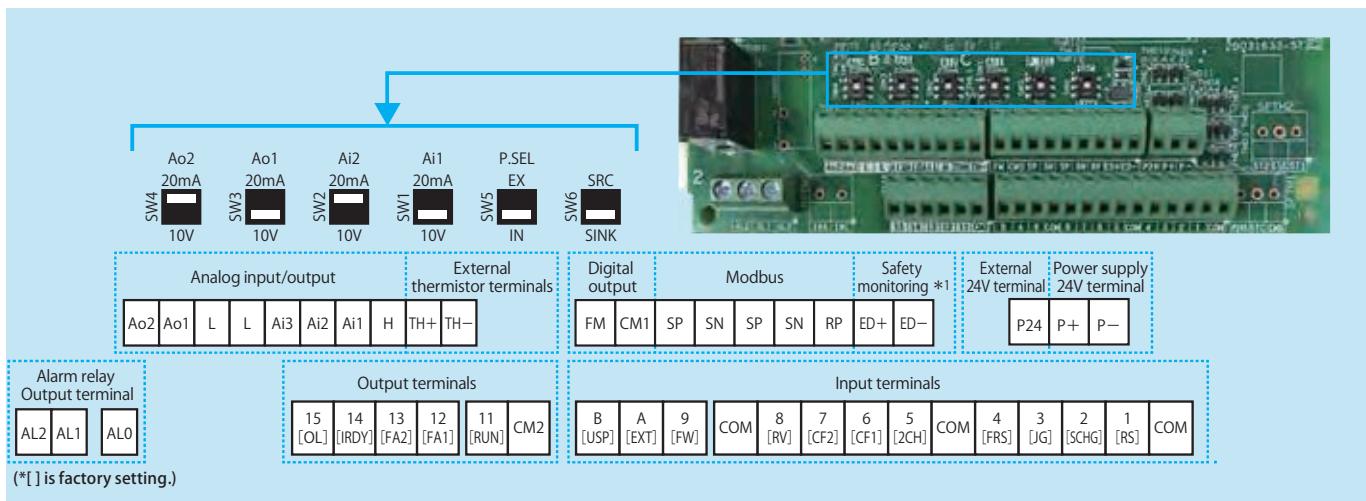

(1) Main Circuit Terminals

● Terminal Description

Terminal Symbol	Terminal Name	Terminal Symbol	Terminal Name
R/L1, S/L2, T/L3	Main power supply input terminals	P+/, N/☒	External braking unit connection terminals
U/T1, V/T2, W/T3	Inverter output terminals	G	Ground connection terminal
PD/+1, P+/-	DC reactor connection terminals	R0, T0	Control power supply input terminals
P+/, RB	External braking resistor connection terminals		

(2) Control Circuit Terminals

● Terminal Description

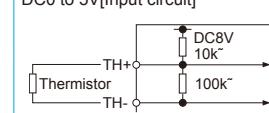

● Configuration of switches

Indication	Name of switch	Description (before shipment: underlined part)
Ai1(SW1)	Analog input 1 change	Change the input specification of Analog input 1 (Ai1 terminal) 10V: Voltage input is available. 20mA: Current input is available.
Ai2(SW2)	Analog input 2 change	Change the input specification of Analog input 2 (Ai2 terminal) 10V: Voltage input is available. 20mA: Current input is available.
Ao1(SW3)	Analog output 1 change	Change the output specification of Analog output 1 (Ao1 terminal). 10V: Voltage output is applied. 20mA: Current output is applied.
Ao2(SW4)	Analog output 2 change	Change the output specification of Analog output 2 (Ao2 terminal). 10V: Voltage output is applied. 20mA: Current output is applied.
PSEL(SW5)	Change of the power supply method to input terminals	Change the power supply method to input terminals. IN: Activate input terminals by an internal power source. EX: Activate input terminals by inputting an external power source.(For EX, power supply is required between input terminals and COM.)
SRC/SINK(SW6)	Input terminal Sink/Source logic switching	Sink or source logic of the input terminal is switched. This is enabled when SW5 is IN. SINK: Switch to Sink logic. SRC: Switch to Source logic.

● Terminal Description

		Symbol	Terminal name	Description	Electric characteristics	
Voltage/current switchable analog input/output terminal		L	COM for analog power supply	COM terminals for analog input terminals (Ai1,Ai2,Ai3) and analog output terminals (Ao1,Ao2). Two L terminals are available.	-	
		H	Speed setting power supply	DC10V power supply. Used for voltage input with analog input terminals (Ai1,Ai2,Ai3) using a variable resistor.	Max. allowable input current 20mA	
Analog input	Ai1	Analog input terminal 1 (Voltage/current selector SW1)	Either Ai1 or Ai2 can be used by switching the selector switch to DC0 to 10V voltage input or 0-to 20mA current input. Used as speed input and feedback input.			
	Ai2	Analog input terminal 2 (Voltage/current selector SW2)				
	Ai3	Analog input terminal 3	DC-10 to 10V voltage input is available. Used as speed input and feedback input.	Voltage input only: <ul style="list-style-type: none">• Input impedance Approx.10kΩ• Allowable voltage input DC-0.3V to 12V		
Analog output	Ao1	Analog output terminal 1 (Voltage/current selector SW3)	Either Ao1 or Ao2 can be used as an output for inverter monitoring data by switching the selector switch to DC0 to 10V voltage output or 0 to 20mA current output.			
	Ao2	Analog output terminal 2 (Voltage/current selector SW4)				
	24V power supply		P24	24V output power source terminal	This terminal supplies DC24V power for contact signals.	Max. output 100mA
			P+	Terminal for external 24V input (24V)	Input external DC24V power supply to the inverter. Inputting 24V power supply can change parameter settings and perform optional communication operations without control power supply.	
			P-	Terminal for external 24V input (0V)		
Intelligent input terminal	Digital input	Contact point	9 8 7 6 5 4 3 2 1	Input terminal	Terminal functions are selectable according to the parameter settings for each terminal. Switching SW6 to SRC or SINK allows you to select SINK or Source logic.	
		Pulse	A	Pulse input-A	This is a terminal for pulse input. A and B terminals can be used also as an input terminal. Terminal functions are selectable according to the parameter settings for each terminal. The maximum input pulse rate is 32kpps.	
			B	Pulse input-B		
		Common	COM	Input (common)	This is a common terminal for digital input terminals (1,2,3,4,5,6,7,8,9,A and B). Three COM terminals are available.	
Intelligent output terminals	Digital output	Open collector	15 14 13 12 11	Output terminal	Terminal functions are selectable according to the parameter settings for each terminal.This is available for both SINK and Source logics.	
			CM2	Output (common)	This is a common terminal for output terminals 11 to 15.	
		Relay	AL0 AL1 AL2	1c relay terminal	Relays for C contact output	
FM output terminal	FM output	Monitor output	FM	Digital monitor (voltage)	Digital monitor output is selectable from PWM output with 6.4ms cycle or pulse output with a variable duty cycle of approx. 50%.	
			CM1	COM for digital monitor	This is a common terminal for digital monitor.This is also used as 0V reference potential for P24.	
Thermistor terminal	Analog input	TH+	External thermistor input	Connect to an external thermistor to make the inverter trip if an abnormal temperature is detected.	DC0 to 5V[Input circuit] 	
		TH-	Common terminal for external thermistor input	Connect the thermistor to TH+ and TH-. The impedance to detect temperature errors can be adjusted within the range 0Ω to 9,999Ω. [Recommended thermistor properties] Allowable rated power: 100 mW or more Impedance at temperature error: 3kΩ		
RS485 communication	Serial communication	SP SN RP (CM1)	MODBUS terminal (RS-485)	SP terminal : RS-485 differential(+) signal SN terminal : RS-485 differential(-) signal RP terminal : Connect to SP through a termination resistor CM1 terminal : Connect to the signal ground of external communication devices. There are two SP and two SN terminals, which are connected internally. The maximum baud rate is 115.2kbps.	Termination resistor (120Ω) integrated Enabled: RP-SN shorted Disabled: RP-SN opened	

Function list

■ Monitor mode List

Code No.	Parameter Meaning	Selectable User Setting
da-01	Output frequency monitor	0.00 to 590.00(Hz)<current output frequency>

dC-50	Firmware Ver. Monitor	00.00 to 99.255
dC-53	Firmware Gr. Monitor	00(Standard)
dE-50	Warning monitor	Refer to user's guide

※1)This parameter is specially used for safety function, not for SH1 series

※2)This parameter is only effective when using multifunctional digital operator

■ Variable mode monitor (F code)

Code No.	Parameter Meaning	Selectable User Setting
FA-01	Main Speed reference monitor	0.00 to 590.00(Hz)
FA-02	Sub Speed reference monitor	-590.00 to 590.00(Hz) when configured with parameter, 0.00 to 590.00(Hz)
FA-10	Acceleration time monitor	0.00 to 3600.00(s)
FA-12	Deceleration time monitor	
FA-15	Torque reference monitor	-500.0 to 500.0(%)
FA-16	Torque bias monitor	-500.0 to 500.0(%)
FA-20	Position reference monitor	when [AA123]=0 -268435455 to +268435455(pulse)/ when [AA123]=03 -1073741823 to +1073741823(pulse)
FA-30	PID1 Set Value 1 monitor	
FA-32	PID1 Set Value 2 monitor	0.00 to 100.00(%) (adjustable with [AH-04][AH-05][AH-06])
FA-34	PID1 Set Value 3 monitor	
FA-36	PID2 Set Value monitor	0.00 to 100.00(%) (adjustable with [AJ-04][AJ-05][AJ-06])
FA-38	PID3 Set Value monitor	0.00 to 100.00(%) (adjustable with [AJ-24][AJ-25][AJ-26])
FA-40	PID4 Set Value monitor	0.00 to 100.00(%) (adjustable with [AJ-44][AJ-45][AJ-46])

※3)This parameter is only effective when using multifunctional digital operator

● Parameter mode Lis

■Parameter naming (Nomenclature)

*By default the motor 1 is enabled in the case that 08:[SET] is no assigned in the intelligent Input terminals [CA-01] to [CA-11].

AA 1 01

- Internal number in the group
- :-Common for 1st and 2nd motor
- 1:1st motor enabled if function [SET] is OFF
2:2nd motor enabled if function [SET] is ON
- Parameter group

■Parameter mode (A code)

Code No.	Parameter Meaning	Selectable User Setting	Initial value
AA101	Main speed input source selection, 1st-motor	01 (Setting by Terminal [Ai1]) /02 (Setting by Terminal [Ai2]) /03 (Setting by Terminal [Ai3]) /04 (Setting by Terminal [Ai4]) /05 (Setting by Terminal [Ai5]) /06 (Setting by Terminal [Ai6]) /07 (Setting by parameter) /08 (Setting by RS485) /09 (Option-1) /10 (Option-2) /11 (Option-3) /12 (Pulse train input(internal)) /13 (Pulse train input(Option)) /14 (Setting by EzSQ) /15 (PID function) /16 (Volume on keypad)	07(*FF)/ 01(*FEF, *FUF)
AA102	Sub frequency input source selection, 1st-motor	00 (Disable) /01 (Setting by Terminal [Ai1]) /02 (Setting by Terminal [Ai2]) /03 (Setting by Terminal [Ai3]) /04 (Setting by Terminal [Ai4]) /05 (Setting by Terminal [Ai5]) /06 (Setting by Terminal [Ai6]) /07 (Setting by parameter) /08 (Setting by RS485) /09 (Option-1) /10 (Option-2) /11 (Option-3) /12 (Pulse train input(internal)) /13 (Pulse train input(Option)) /14 (Setting by EzSQ) /15 (PID function) /16 (Volume on keypad)	00
AA104	Sub speed setting, 1st-motor	0.00 to 590.00(Hz)	0.00
AA105	Calculation symbol selection for Speed reference, 1st-motor	00 (Disable) /01 (Addition(ADD)) /02 (Subtraction(SUB)) /03 (Multiplication(MUL))	00
AA106	Add frequency setting, 1st-motor	-590.00 to +590.00(Hz)	0.00
AA111	Run-command input source selection, 1st-motor	00 (Terminal [FW]/[RV]) /01 (3-wire) /02 (RUN key on keypad) /03 (Setting by RS485) /04 (Option-1) /05 (Option-2) /06 (Option-3)	02(*FF)/ 00(*FEF, *FUF)
AA-12	RUN-key of keypad Rotation Direction, 1st-motor	00 (Forward) /01 (Reverse)	00
AA-13	STOP-key enable at RUN-command from terminal, 1st-motor	00 (Disable) /01 (Enable) /02 (Enable at only trip reset)	01
AA114	RUN-direction restriction, 1st-motor	00 (Disable) /01 (Enable only Forward rotation) /02 (Enable only Reverse rotation)	00
AA115	STOP mode selection, 1st-motor	00 (Deceleration until stop) /01 (Free-run stop)	00
AA121	Control mode selection, 1st-motor	IM control: 00 (VF control (Constant torque)) /01 (VF control (Reduced torque)) /02 (VF control (Free-V/f)) /03 (Constant torque with Automatic-trq boost) /04 (VF control with encoder (Constant torque)) /05 (VF control with encoder (Reduced torque)) /06 (VF control with encoder (Free-V/f)) /07 (VF control with PG (Constant torque with Automatic-trq boost)) /08 (Sensorless vector control) /09 (0Hz Sensorless vector control) /10 (Vector control with encoder) SM/PMM control: 11 (Synchronous start up for smart sensorless vector control) /12 (IVMS start up for smart sensorless vector control)	00
AA123	Vector control mode selection, 1st-motor	00 (Speed/Torque control mode) /01 (Pulse train position control) /02 (Position control) /03 (High-resolution position control)	00
AA201	Main speed input source selection, 2nd-motor	same to AA101	07(*FF)/ 01(*FEF, *FUF)
AA202	Sub speed input source selection, 2nd-motor	same to AA102	00
AA204	Sub speed setting, 2nd-motor	same to AA104	0.00
AA205	Calculation symbol selection for Speed reference, 2nd-motor	same to AA105	00
AA206	Add frequency setting, 2nd-motor	same to AA106	0.00
AA211	Run-command input source selection, 2nd-motor	same to AA111	02(*FF)/ 00(*FEF, *FUF)
AA214	RUN-direction restriction, 1st-motor	same to AA114	00
AA215	STOP mode selection, 1st-motor	same to AA115	00
AA221	Control mode selection, 2nd-motor	same as AA121	00
AA223	Vector control mode selection, 2nd-motor	same to AA123	00
Ab-01	Frequency conversion gain	0.01 to 100.00	1.00
Ab-03	Multispeed operation selection	00 (Binary (16-speeds)) /01 (Bit (8-speeds))	00
Ab110	Multispeed-0 setting, 1st-motor	0.00 to 590.00(Hz)	0.00
Ab-11 to Ab-25	Multispeed-1 to Multispeed-15 setting		
Ab210	Multispeed-0 setting, 2nd-motor		

Code No.	Parameter Meaning	Selectable User Setting	Initial value
AC-01	Acceleration/ Deceleration time input selection	00 (Setting by parameter) /01 (Setting from Option-1) /02 (Setting from Option-2) /03 (Setting from Option-3) /04 (Setting by programing function)	00
AC-02	Acceleration/ Deceleration selection	00 (Common setting) /01 (Multi stage Acceleration/ Deceleration)	00
AC-03	Acceleration curve selection	00 (Liner Acceleration) /01 (S-curve Acceleration) /02 (U-curve Acceleration) /03 (Reverse U-curve Acceleration) /04 (Elevete S-curve Acceleration)	00
AC-04	Deceleration curve selection	1 to 10	2
AC-05	Acceleration curve constant setting		
AC-06	Deceleration curve constant setting		
AC-08	EL-S-curve ratio @start of acceleration	0 to 100	25
AC-09	EL-S-curve ratio @end of acceleration		
AC-10	EL-S-curve ratio @start of deceleration		
AC-11	EL-S-curve ratio @end of deceleration	Select method to switch to Accel2/Decel2 Profile, 1st-motor	00
AC115	00 (Switching by [2CH] terminal) /01 (Switching by setting) /02 (Switching only when rotation is reversed)		
AC116	Accel1 to Accel2 Frequency transition point, 1st-motor	0.00 to 590.00(Hz)	0.00
AC117	Decel1 to Decel2 Frequency transition point, 1st-motor		
AC120	Acceleration time setting 1, 1st-motor	0.00 to 3600.00(s)	30.00
AC122	Deceleration time setting 1, 1st-motor		
AC124	Acceleration time setting 2, 1st-motor		
AC126	Deceleration time setting 2, 1st-motor		
AC-30, 34, 38, 42, 46, 50, 54, 58, 62, 66, 70, 74, 78, 82, 86	Acceleration time setting for Multispeed-1 to Multispeed-15	0.00 to 3600.00(s)	0.00
AC-32, 36, 40, 44, 48, 52, 56, 60, 64, 68, 72, 76, 80, 84, 88	Deceleration time setting for Multispeed-1 to Multispeed-15		
AC215	Select method to switch to Accel2/Decel2 Profile, 2nd-motor	same to AC115	00
AC216	Accel1 to Accel2 Frequency transition point, 2nd-motor	same to AC116	0.00
AC217	Decel1 to Decel2 Frequency transition point, 2nd-motor	same to AC117	
AC220	Acceleration time setting 1, 2nd-motor	same to AC120	30.00
AC222	Deceleration time setting 1, 2nd-motor	same to AC122	
AC224	Acceleration time setting 1, 2nd-motor	same to AC124	
AC226	Deceleration time setting 1, 2nd-motor	same to AC126	15.00
Ad-01	Torque reference input source selection	01 (Setting by Terminal [Ai1]) /02 (Setting by Terminal [Ai2]) /03 (Setting by Terminal [Ai3]) /04 (Setting by Terminal [Ai4]) /05 (Setting by Terminal [Ai5]) /06 (Setting by Terminal [Ai6]) /07 (Setting by parameter) /08 (Setting by RS485) /09 (Option-1) /10 (Option-2) /11 (Option-3) /12 (Pulse train input(internal)) /13 (Pulse train input(Option)) /14 (Setting by EzSQ) /15 (PID function)	07
Ad-02	Torque reference value setting	-500.0 to 500.0(%)	0.0
Ad-03	Polarity selection for torque reference	00 (As indication by the sign) /01 (Depending on the operation direction)	00
Ad-04	Switching time of Speed control to Torque control	0 to 1000(ms)	100
Ad-11	Torque bias input source selection	00 (Disable) /01 (Setting by Terminal [Ai1]) /02 (Setting by Terminal [Ai2]) /03 (Setting by Terminal [Ai3]) /04 (Setting by Terminal [Ai4]) /05 (Setting by Terminal [Ai5]) /06 (Setting by Terminal [Ai6]) /07 (Setting by parameter) /08 (Setting by RS485) /09 (Option-1) /10 (Option-2) /11 (Option-3) /12 (Pulse train input(internal)) /13 (Pulse train input(Option)) /15 (PID function)	00
Ad-12	Torque bias value setting	-500.0 to 500.0(%)	0.0
Ad-13	Polarity selection for torque bias	00 (As indication by the sign) /01 (Depending on the operation direction)	00
Ad-14	Terminal [TBS] active	00 (Disable) /01 (Enable)	00
Ad-40	Input selection for speed limit at torque control	01 (Setting by Terminal [Ai1]) /02 (Setting by Terminal [Ai2]) /03 (Setting by Terminal [Ai3]) /04 (Setting by Terminal [Ai4]) /05 (Setting by Terminal [Ai5]) /06 (Setting by Terminal [Ai6]) /07 (Setting by parameter) /08 (Setting by RS485) /09 (Option-1) /10 (Option-2) /11 (Option-3) /12 (Pulse train input(internal)) /13 (Pulse train input(Option)) /15 (PID function)	07
Ad-41	Speed limit at torque control (at Forward rotation)	0.00 to 590.00(Hz)	0.00
Ad-42	Speed limit at torque control (at Reverse rotation)		

Code No.	Parameter Meaning	Selectable User Setting	Initial value

※7) This parameter is not for SH1 series.
oE-01~oL-76 needs to use together with corresponding option card.

■ Parameter mode (P code)

Code No.	Parameter Meaning	Selectable User Setting	Initial value
PA-01	Mode selection for Emergency-force drive	00 (Disable) /01 (Enable)	00
PA-02	Frequency reference setting at Emergency-force drive	0.00 to 590.00(Hz)	0.00
PA-03	Direction command at Emergency-force drive	00 (Forward Rotation) /01 (Reverse Rotation)	00
PA-04	Commercial power supply bypass function selection	00 (Disable) /01 (Enable)	00
PA-05	Delay time of Bypass function	0.0 to 1000.0(s)	5.0
PA-20	Simulation mode enable	00 (Disable) /01 (Enable)	00
PA-21	Error code selection for Alarm test	000 to 255	000
PA-22	Output current monitor optional output enable	00 (Disable) /01 (Setting by Keypad) /02 (Setting by Terminal[Ai1]) /03 (Setting by Terminal[Ai2]) /04 (Setting by Terminal[Ai3]) /05 (Setting by Terminal[Ai4]) /06 (Setting by Terminal[Ai5]) /07 (Setting by Terminal[Ai6])	01
PA-23	Output current monitor optional output value setting	INV related current ×(0.00 to 3.00)	0.0
PA-24	DC-bus voltage monitor optional output enable	00 (Disable) /01 (Setting by Keypad) /02 (Setting by Terminal[Ai1]) /03 (Setting by Terminal[Ai2]) /04 (Setting by Terminal[Ai3]) /05 (Setting by Terminal[Ai4]) /06 (Setting by Terminal[Ai5]) /07 (Setting by Terminal[Ai6])	01
PA-25	DC-bus voltage monitor optional value output	(200V class) 0.0 to 450.0Vdc (400V class) 0.0 to 900.0Vdc	(200V class) 270.0 (400V class) 540.0
PA-26	Output voltage monitor optional output enable	00 (Disable) /01 (Setting by Keypad) /02 (Setting by Terminal[Ai1]) /03 (Setting by Terminal[Ai2]) /04 (Setting by Terminal[Ai3]) /05 (Setting by Terminal[Ai4]) /06 (Setting by Terminal[Ai5]) /07 (Setting by Terminal[Ai6])	01
PA-27	Output voltage monitor optional output value setting	(200V class) 0.0 to 300.0(V) (400V class) 0.0 to 600.0(V)	0.0
PA-28	Output torque monitor optional output enable	00 (Disable) /01 (Setting by Keypad) /02 (Setting by Terminal[Ai1]) /03 (Setting by Terminal[Ai2]) /04 (Setting by Terminal[Ai3]) /05 (Setting by Terminal[Ai4]) /06 (Setting by Terminal[Ai5]) /07 (Setting by Terminal[Ai6])	01
PA-29	Output torque monitor optional output value setting	-500.0 to 500.0(%)	0.0
PA-30	Start with frequency matching optional Setting enable	00 (Disable) /01 (Setting by Keypad) /02 (Setting by Terminal[Ai1]) /03 (Setting by Terminal[Ai2]) /04 (Setting by Terminal[Ai3]) /05 (Setting by Terminal[Ai4]) /06 (Setting by Terminal[Ai5]) /07 (Setting by Terminal[Ai6])	01
PA-31	Start with frequency matching optional value setting	0.00 to 590.00(Hz)	0.00

Parameter mode (U code)

Code No.	Parameter Meaning	Selectable User Setting	Initial value
UA-01	Password for Display	0000 to FFFF	0000
UA-02	Password for SoftLock		0000
UA-10	Display restriction selection	/00 (Full display) /01 (Function-specific display) /02 (User setting display) /03 (Data comparison display) /04 (Monitor only)	00
UA-12	Accumulation input power monitor clear	/00 (Disable) /01 (Clear)	00
UA-13	Display gain for Accumulation input power monitor	1 to 1000	1
UA-14	Accumulation output power monitor clear	/00 (Disable) /01 (Clear)	00
UA-15	Display gain for Accumulation output power monitor	1 to 1000	1
UA-16	Soft Lock selection	00 (Terminal [SFT]) /01(Always effective)	00
UA-17	Soft Lock target selection	/00 (All the data change is impossible) /01 (Data change is impossible except setting Speed)	00
UA-18	Data R/W selection	/00 (Enabling R/W by operator) /01 (Disabling R/W by operator)	00
UA-19	Low battery warning enable	/00 (Disable) /01 (Warning) /02 (Error)	00
UA-20	Action selection at keypad disconnection	/00 (Error) /01 (Error output after Deceleration stop) /02 (Ignore) /03 (Free run stop) /04 (Deceleration stop)	02
UA-21	2nd-motor parameter display selection	00 (Hidden) /01 (Display)	01
UA-22	Option parameter display selection		01
UA-30	User parameter auto setting function enable	/00 (Disable) /01 (Enable)	00
UA-31 to UA-62	User parameter 1 to 32 selection	no/dA-01 to UF-32 (except UA-31 to UA-62)	no
UA-90	QOP indication off waiting time	0 to 60(min)	0
UA-91	Initial Disply selection	(to be selectro from d, F parameters)	dA-01
UA-92	Auto-return to Initial display enable		00
UA-93	Setting enable at Monitor display	00 (Disable) /01 (Enable)	00
UA-94	Multispeed change on the frequency reference monitor display		00
Ub-01	Initialize Mode selection	/00 (Disable) /01 (Error history clear) /02 (Data initialize) /03 (Error history clear & Data initialize) /04 (Error history clear & Data initialize & EzSQ clear) /05 (he parameter related to the terminal is excluded) /06 (The parameter related to the comm. is excluded) /07 (The parameter related to the terminal and comm. is excluded) /08 (EzSQ only) /09 (Trace Data only)	00

■Input terminal function list

Function code	Symbol	Function name
0	no	Not use
1	FW	Forward rotation
2	RV	Reverse rotation
3 to 6	CF1 to 4	Multi speed selection 1 to 4
7 to 13	SF1 to 7	Multi speed Bit-1 to 7
14	ADD	Trigger for frequency addition[Ab105]
15	SCHG	Speed reference change
16	STA	3-wire Start
17	STP	3-wire Stop
18	FR	Forward Over Travel
19	AHD	analog command holding
20	FUP	Remote control Speed-UP function
21	FDN	Remote control Speed-DOWN function
22	UDC	Remote control data clearing
23	F-OP	Force operation
24	SET	2nd-motor control
28	RS	Reset
29	JG	Jogging
30	DB	External Dynamic brake
31	2CH	2-step Acceleration/Deceleration
32	FRS	Free run stop
33	EXT	External fault
34	USP	unattended start protection
35	CS	Commercial Supply change
36	SFT	Soft-Lock
37	BOK	Answer back from Brake
38	OLR	Overload restriction selection
39	KHC	Accumulation input power clearance
40	OKHC	Accumulation output power clearance
41	PID	Disable PID1
42	PIDC	PID1 integration reset
43	PID2	Disable PID2
44	PIDC2	PID2 integration reset
45	PID3	Disable PID3
46	PIDC3	PID3 integration reset
47	PID4	Disable PID4
48	PIDC4	PID4 integration reset
51 to 54	SVC1 to 4	Multi set-point selection 1 to 4
55	PRO	PID gain change
56	PIO1	PID output switching 1
57	PIO2	PID output switching 2
58	SLEP	SLEEP condition activation
59	WAKE	WAKE condition activation
60	TL	Torque limit enable
61	TRQ1	Torque limit selection bit 1
62	TRQ2	Torque limit selection bit 2
63	PPI	P/PI control mode selection
64	CAS	Control gain change
65	SON	Servo-on
66	FOC	Forcing
67	ATR	Permission of torque control
68	TBS	Torque Bias enable
69	ORT	Orientation
71	LAC	Acceleration/Deceleration cancellation
72	PCLR	Position deviation clear
73	STAT	pulse train position command input enable
74	PUP	Position bias (ADD)
75	PDN	Position bias (SUB)
76 to 79	CP1 to 4	Multistage position settings selection 1 to 4
80	ORL	Limit signal of Homing function
81	ORG	Start signal of Homing function
82	FOT	Forward Over Travel
83	ROT	Reserve Over Travel
84	SPD	speed / position switching
85	PSET	Position data presetting
86 to 96	MI1 to 11	General-purpose input 1 to 11
97	PCC	Pulse counter clearing
98	ECON	EzCOM activation
99	PRG	Program RUN
100	HLD	Acceleration/Deceleration disable
101	REN	RUN enable
102	DISP	Display lock
103	PLA	Pulse count A
104	PLB	Pulse count B
105	EMF	Emergency-Force Drive activation
107	COK	Contactor check signal
108	DTR	Data trace start
109	PLZ	Pulse train input Z
110	TCT	Teach-in signal

■Intelligent output terminal function list

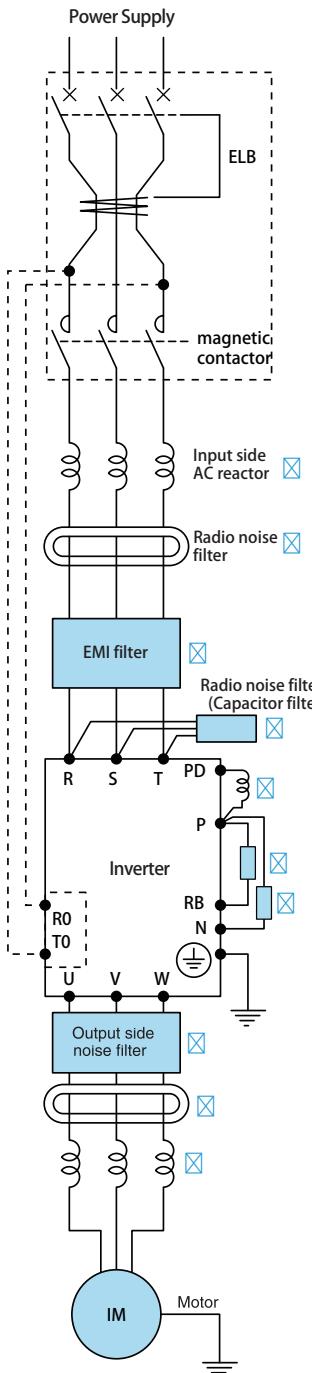

Function code	Symbol	Function name
0	no	Not use
1	RUN	Running
2	FA1	Constant-speed reached
3	FA2	Set speed overreached
4	FA3	Set frequency reached
5	FA4	Set speed overreached 2
6	FA5	Set speed reached
7	IRDY	inverter ready
8	FWR	Forward rotation
9	RVR	Reverse rotation
10	FREF	Speed referenc = Keypad is selected
11	REF	Run command = Keypad is selected
12	SETM	2nd control is selected
16	OPO	Option output
17	AL	Alarm
18	MJA	Major failure
19	OTQ	Over-torque
20	IP	Instantaneous power failure
21	UV	Undervoltage
22	TRQ	Torque limited
23	IPS	IP-Non stop function is active
24	RNT	Accumulated operation time over
25	ONT	Accumulated power-on time over
26	THM	Electronic thermal alarm signal(MTR)
27	THC	Electronic thermal alarm signal(CTL)
29	WAC	Capacitor life warning
30	WAF	Cooling-fan speed drop
31	FR	Starting contact signal
32	OHF	Heat sink overheat warning
33	LOC	Low-current indication signal
34	LOC2	Low-current indication signal 2
35	OL	Overload notice advance signal (1)
36	OL2	Overload notice advance signal (2)
37	BRK	Brake release
38	BER	Brake error
39	CON	Contactor control
40	ZS	0Hz detection signal
41	DSE	Excessive speed deviation
42	PDD	Position deviation over
43	POK	Positioning completed
44	PCMP	Pulse count compare match output
45	OD	Deviation over for PID control
46	FBV	PID1 feedback comparison
47	OD2	OD:Deviation over for PID2 control
48	FBV2	PID2 feedback comparison
49	NDC	Communication line disconnection
50	AI1DC	Analog [Ai1] disconnection detection
51	AI2DC	Analog [Ai2] disconnection detection
52	AI3DC	Analog [Ai3] disconnection detection
53	AI4DC	Analog [Ai4] disconnection detection
54	AI5DC	Analog [Ai5] disconnection detection
55	AI6DC	Analog [Ai6] disconnection detection
56 to 61	WCA1 to 6	Window comparator Ai1 to 6
62 to 68	LOG1 to 7	Logical operation result 1 to 7
69 to 75	MO1 to 7	General-purpose output 1 to 7
76	EMFC	Bypass mode indicator
77	EMBP	Speed deviation over
78	WFT	Trace function waiting for trigger
79	TRA	Trace function data logging
80	LBK	Low-battery of keypad
81	OVS	Over-Voltage power Supply
84 to 87	AC0 to 3	Alarm code bit-0 to 3
89	OD3	Deviation over for PID control
90	FBV3	PID3 feedback comparison
91	OD4	Deviation over for PID4 control
92	FBV4	PID4 feedback comparison
93	SSE	PID soft start error

Error events

Code	Details	Corrective actions	Related parameter
E001	▪ By the load and the operating conditions, overcurrent has occurred	<ul style="list-style-type: none"> ▪ If the acceleration is fast, increase the acceleration time ▪ Use the overcurrent suppression function ▪ Use the overload restriction function ▪ Use the overcurrent retry function ▪ In order to stabilize the control, adjust the constant 	[AC120] [bA120] [bA122] [bb-22] [HA-01]
E005 E039	▪ By the load and the operating conditions, current has increased.	<ul style="list-style-type: none"> ▪ If the acceleration is fast, increase the acceleration time ▪ Use the overload restriction function ▪ If the motor sound is abnormal, in order to stabilize the control, adjust the constant 	[AC120] [bA122] [HA-01]
E006	▪ Braking resistor use is limited.	<ul style="list-style-type: none"> ▪ If the deceleration is fast, increase the deceleration time ▪ Reselection of the braking resistor is necessary 	[AC122] [bA-60]
E007	<ul style="list-style-type: none"> ▪ Internal voltage has increased ▪ Insufficient capacity of the inverter 	<ul style="list-style-type: none"> ▪ If the deceleration is fast, increase the deceleration time ▪ Use the overvoltage suppression functions ▪ Use the overvoltage retry function ▪ Use a braking option 	[AC122] [bA140][bA146] [bb-23] -
E008 E011	▪ Main CPU abnormality	<ul style="list-style-type: none"> ▪ Carry out counter measures for the inverter noise ▪ Consecutive errors may cause a failure 	- -
E009	▪ Main circuit supply has drop	<ul style="list-style-type: none"> ▪ To disable the undervoltage error, change setting ▪ Use the undervoltage retry function 	[bb-27] [bb-21]
E010	▪ Current detector abnormality	<ul style="list-style-type: none"> ▪ Carry out counter measures for the inverter noise ▪ Consecutive errors may cause a failure, replacement of the components is necessary 	- -
E012	▪ [EXT] input terminal is ON	<ul style="list-style-type: none"> ▪ Check the signal status of the input terminal ▪ Check if there are no operations by communication or programme 	[dA-51] -
E013	▪ [USP] input terminal is ON if at the start-up, the RUN command was issued right at the start up	▪ Make sure that an operation command is not introduced at the time of turning ON the inverter	[dA-51]
E014	▪ Ground fault detected at main circuit voltage turning-on	▪ Check for ground fault of the motor, wiring, etc.	-
E015	▪ Continued state of incoming high power	▪ Review the power circumstances, such as the power supply capacity	[dA-40]
E016	▪ Instantaneous power failure, control supply has dropped	▪ If you wish to avoid the tripping, use the power loss retry function.	[bb-20]
E019	▪ Abnormality in temperature detector circuit	<ul style="list-style-type: none"> ▪ Carry out counter measures for the inverter noise ▪ Consecutive errors may cause a failure 	- -
E020	▪ Because of cooling-fan life span, internal temperature has raised	▪ Change of the cooling-fan is necessary	-

Note1: Field wiring connection must be made by a UL and c-UL listed closed-loop terminal connector sized for the wire gauge involved. Connector must be fixed using the crimping tool specified by the connector manufacturer.

Note2: Be sure to use large wire gauges for power wiring if the distance exceeds 20m (66ft).

Note3: The wire gauges in the above table shows the designed values based on HIV cables (with thermal resistance of 75° C).

Note4: Please use the round type crimp terminals (for the UL standard) suitable for the use electric wire when you connect the electric wire with the main circuit terminal block. Please put on pressure to the crimp terminals with a crimp tool that the crimp terminal maker recommends.

Name	Function
① Input side AC reactor	This is useful in suppressing harmonics induced on the power supply lines, or when the main power voltage imbalance exceeds 3% (and power source capacity is more than 500kVA), or to smooth out line fluctuations. It also improves the power factor.
② EMI filter	Reduces the conducted noise on the power supply wiring generated by the inverter.
③ Radio noise filter	Electrical noise interference may occur on nearby equipment such as a radio receiver. This magnetic choke filter helps reduce radiated noise (can also be used on output).
④ Radio noise filter (Capacitor filter)	This capacitor filter reduces radiated noise from the main power wires in the inverter input side.
⑤ DC link choke	Suppresses harmonics generated by the inverter.
⑥ Braking resistor	This is useful for increasing the inverter's control torque for high duty-cycle (on/off applications, and improving the decelerating capability.
⑦ Braking unit	
⑧ Output side noise filter	Reduces radiated noise from wiring in the inverter output side.
⑨ Radio noise filter	Electrical noise interference may occur on nearby equipment such as a radio receiver. This magnetic choke filter helps reduce radiated noise (can also be used on input).
⑩ AC reactor	This reactor reduces the vibration in the motor caused by the inverter's switching waveforms, by smoothing the waveforms to approximate commercial power quality. It is also useful when wiring from the inverter to the motor is more than 10m in length, to reduce harmonics.
LCR filter	Sine wave shaping filter for the output side.

Option cassette

Three option cassettes can be installed in SH1. Please extend according to machine and system specifications.

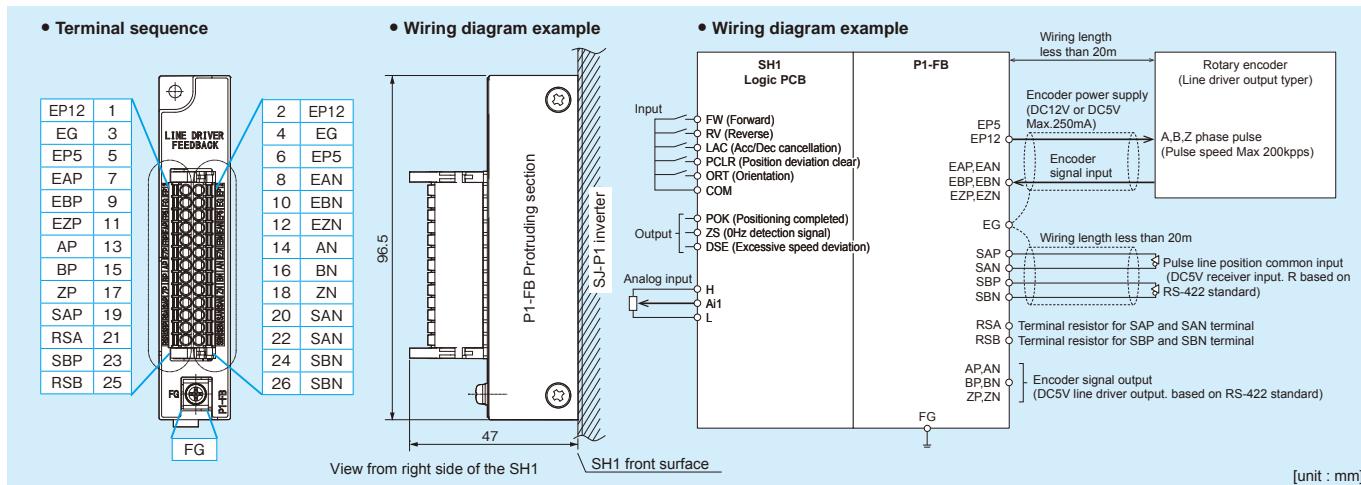

● Encoder feedback option [P1-FB]

P1-FB successfully detects the rotation speed of the motor equipped with an encoder and feedbacks to the inverter. Thus, it contributes to suppressing the speed variation and helps to operate with high accuracy.

In addition, such function can be realized such as position command, synchronous operation and orientation function.

[Application example]

High precision operation of main motor for Winding machine, Wire drawing machine, Transport machine, Extruder and more.

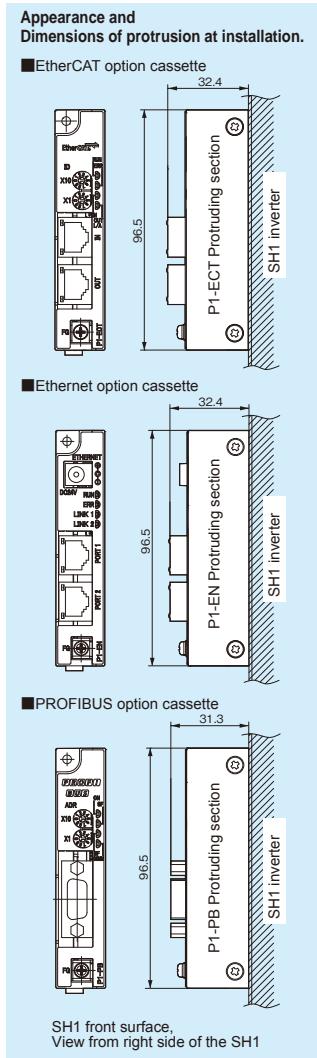

● Field network communication option [P1-ECT, P1-EN, P1-PB]

With the field network option, the inverter can be operated, status monitor, parameter management etc from the host controller. Since these are cassette type mounted on the front of the inverter, installation, wiring, station number setting and status check of various indicators are very easy.

Item		Specification
EtherCAT OPTION 	Communication protocol	EtherCAT CiA402 Drive profile
	Physical layer	100BASE-TX (IEEE802.3)
	Connector	RJ45 (IN / OUT)
	Communication distance	Distance between nodes(between devices) : 100[m]max
	Station address*	1 to 99 : Set by the address setting switch, 1 to 65535 : Set by configuration (The station address setting depends on the addressing mode used by the EtherCAT master.)
	Distributed clock	Free run mode (asynchronous)
	Process data	PDO free mapping
	Mailbox (CoE)	Emergency messages, SDO requests, SDO responses, Abort SDO
	CiA402 drive profile	Velocity mode
	Applicable cable	100BX-TX support (category 5e or higher) STP(Shield twist pair) cable (Straight or Crossed).
Ethernet (Modbus-TCP) OPTION 	Applicable standards	IEEE802.3
	Communication protocol	TCP/IP (Available for IPv4 and IPv6)
	Communication protocol (application layer)	Modbus TCP
	Physical layer	10BASE-T,100BASE-TX (IEEE802.3)
	Connector	RJ45 (PORT1/PORT2)
	Communication distance	Distance between nodes(between devices) : 100[m]max
	Communication method (transmission speed)	Fixed transmission speed : 10Mbps Full/Half-duplex or 100Mbps Full/Half-duplex Auto detection transmission speed : Auto negotiation
	Auto MDI-X	According to selection of communication method (transmission speed). Selecting the auto negotiation: the function Auto MDI-X is enable. Selecting others: the function Auto MDI-X is disable.
	Port number	502 (it can be configured by the inverter parameter setting)
	Maximum number of sessions	4 (Do not connect our PC setup software(ProDriveNext) multiple at the same time)
PROFIBUS OPTION 	External power supply	DC24V±10%, Current consumption: 1A to 1.5A (Current consumption fluctuates with inverter and/or other options operating and so on.)
	Dielectric strength	AC500V (Between insulation circuit)
	Applicable cable	100BX-TX support (category 5e or higher) STP(Shield twist pair) cable (Straight or Crossed).
	Communication protocol	PROFIBUS DPV0 PROFIBUS DPV1
	Connector, Cable	D-sub 9 pin, PROFIBUS DP cable (EN 50170 part 8-2 as "Cable Type A")
Common environment specification	Node address	0 to 99 : set by rotary switches 1 to 126 : set by parameters (In case of rotary switch setting is in 0)
	Profile	PROFIdrive
	Ambient operating temperature, Ambient operating humidity, Storage temperature	-10 to 50°C, 20 to 90%RH, -20 to 65°C (No icing or condensation conditions.)
	Vibration resistance	5.9m/s ² (0.6G), 10 to 55Hz
	Conformance to EMC and electrical safety standards	IEC/EN61800-3 Second environment, Category C3 IEC/EN61800-5-1 SELV
	Enclosure rating	IP00
	Weight	170g

*NOTE: When installing the optional cassette, it protrudes from the SH1 surface as shown in the figure. Please design the depth dimension of enclosure considering this protrusion, connector, wiring etc. EtherCAT® is registered trademark and patented technology, licensed by Beckhoff Automation GmbH, Germany.

PROFIBUS® is trade names of the non-profit organization PROFIBUS Nutzerorganisation e.V.(PNO).
