# The all-compatible ACS580 series

## Effortless process automation

The ACS580 is an all-compatible ABB general purpose drive, offered in a range of wall-mounted drives, drive modules and cabinet-built drives. It turns complicated to simple and controls processes productively and efficiently.

### One product, many applications

ACS580 drives include all the essential components for typical light industry applications, with a scalable offering from 0.75 kW to 500 kW. The drive is ready to control compressors, conveyors, mixers, pumps and fans, as well as many other variable and constant torque applications. The all-compatible drives family ensures that you will always find the best drive for your needs. These drives share a similar user interface and PC tools, making using and learning them fast and easy.

The drive controls a wide range of applications in different industries, and yet it requires very little setting up or commissioning.

### Reliability and consistent high quality

ACS580 drives are designed for customers who value high quality and robustness in their applications. The product features, such as coated boards and compact IP55 enclosure, make the ACS580 suitable for harsh conditions also. Additionally, all ACS580 drives are tested at maximum temperature and with nominal loads. The tests include performance and all protective functions.

### Easier than ever before

ACS580 drives have all the essential features built-in reducing the commissioning and set-up time. The assistant control panel with multiple language choices is standard in ACS580 drives. Users can also upgrade to an optional Bluetooth control panel for wireless commissioning and monitoring. Primary settings and application control macros ensure quick product setup.

### Instant availability

ACS580 products are available from central stocks around the world for immediate delivery up to 500 kW. The product is also widely available from ABB distributors globally.

## Easily take full control of your processes to comprehensively manage your plant

ACS580 drives are equipped with built-in features that simplify ordering and delivery, and reduce commissioning costs. Everything is provided in a single, compact and ready-to-use package for you to take full control of your processes.

### Start-up and maintenance tool

Drive Composer PC tool for startup, configuration, monitoring and process tuning. The PC tool is connected to the drive's control panel via a USB interface.

### Simple to select, install and use

Built-in features such as an EMC filter, choke, a Modbus RTU fieldbus interface and safe torque off functionality simplify drive selection, installation and use.

### Simplicity at your fingertips as standard

The control panel's straightforward primary settings menu with assistants help you set up the drive quickly and effectively.

### Boosting energy efficiency

Energy efficiency information is available in the energy optimizer feature to help you optimize your processes. The energy optimizer feature operates both in scalar and vector control modes, ensuring maximum torque per ampere and reducing energy drawn from the supply. You can follow the saved energy, CO<sub>2</sub> emissions or money, and see how fast the drive brings you a return on investment.

### Scalable performance

The ACS580 is a perfect match not only for energy-aware applications, but also for applications where sophisticated speed and torque control are needed.

Effortless automation and productivity  
for your success

#### **Communication with all major automation networks**

Optional fieldbus adapters enable connectivity with all major industrial automation networks.

#### **Reliable, integrated safety**

The ATEX-certified thermistor protection module, Ex II (2) GD, CPTC-02 provides enhanced process safety and easy, simplified installation.

#### **Adaptive programming**

Adaptive programming is ideal for creating simple programs for various applications to further optimize the process control. It does not require expertise in programming.

#### **Designed for maximum reliability**

Design features such as coated circuit boards, minimized airflow through the control board section, and earth fault protection make the ACS580 a safe choice for multiple applications.

#### **Remote monitoring**

A built-in web server and stand-alone datalogger NETA-21 module enable worldwide and secure access to drives.

## Typical industries and applications

ACS580 drives improve process performance, increase productivity, reduce external components and ensure machine and personnel safety

## Complete offering, from wall-mounted drives to cabinet installations

Powerful, rugged and robust ACS580 drives ensure ease of use, scalability and quality. A wide power range and various mounting options and enclosure classes ensure you will find a drive for your installation and environment needs.

05 Cabinet-built  
ACS580 drive  
with IP42

### Wall-mounted IP21 drives, standard

Wall-mounted IP21 drives are available in a power and voltage range from 0.75 to 250 kW and 3-phase 380-480 V. Side-by-side mounting, flange mounting and horizontal mounting are all available for wall-mounted ACS580 drives.

—  
01

### Wall-mounted IP55 drives, +B056

The IP55 drive is designed for applications exposed to dust, moisture, vibrations and other harsh environments. It is similar in size to the compact IP21 drives, which provides significant savings in space, maintenance, engineering, and material costs, as well as in setup and commissioning time.

—  
02

### IP20 drives without a conduit box for cabinet installations, +P944

The option code +P944 removes the conduit box from the frames R5-R9, making it easier to install the drive in compact cabinets with limited space. These IP20 units enable you to optimize the solution from cost and dimensioning point of view, and reduce waste. This option is also compatible with the flange mounting option for the frames R5-R9.

**Flange mounting option, +C135**

The flange mounting option enables smaller cabinets to be used as the backside of the drive is installed outside of the cabinet. This mounting method improves the cooling system and decreases the investment in the cabinets.

The flange mounting option is compatible only with the standard IP21 units. It maintains the protection class of IP55 on the backside of the drive, while the front side of the drive is IP20. The option is also available as a loose item with an MRP code. If necessary, the conduit box can be removed from the frames R5-R9 with an option code +P944.

| Flange mounting kit MRP codes | Frame size |
|-------------------------------|------------|
| 3AXD50000105311               | R1 (IP21)  |
| 3AXD50000105328               | R2 (IP21)  |
| 3AXD50000105335               | R3 (IP21)  |
| 3AXD50000031460               | R4 (IP21)  |
| 3AXD50000031461               | R5 (IP21)  |
| 3AXD50000018852               | R6 (IP21)  |
| 3AXD50000018853               | R7 (IP21)  |
| 3AXD50000018854               | R8 (IP21)  |
| 3AXD50000018855               | R9 (IP21)  |

**Drive modules for cabinet installations, IP00 and IP20 (+B051)**

ACS580 drive modules are optimal for system integrators, cabinet builders or OEMs who want to optimize the cabinet design in the 250-500 kW range but do not want to compromise on easy installation, commissioning and maintenance. 3-phase 380-480 V.

04**Construction options for ACS580-04**

| Plus code | Description                                                      |
|-----------|------------------------------------------------------------------|
| +H370     | Full-size cable connection terminals for input power cables      |
| +OH371    | Drive module without full-size output cable connection terminals |
| +OH534    | No pedestal                                                      |
| +OP919    | No cabinet installation ramp                                     |
| +P906     | Remote control board                                             |

**Cabinet-built drives, IP21, IP42 (+B054) and IP54 (+B055)**

Cabinet-built drives are available with IP21 protection class as standard and IP42 and IP54 as options in frame sizes R6 to R11. The drives have a unique cooling arrangement even for harsh environments and a global cabinet design with a high quality standard. The power range is from 75 kW to 500 kW, and the voltage range is 3-phase 380-480 V.

# Common features throughout the whole ACS580 product family

## Standard ACS580 features

### Choke and EMC

- Swinging choke technology mitigates harmonics
- Fulfills standard the EN61000-3-12 standard
- EMC C2 filter for R1-R9 allows safe installation in first environment
- EMC C3 and common mode filter for R10 and R11 allow safe installation in second environment
- Optional EMC C1 filter for R1-R5 ensures the best electro-magnetic performance for first environment. Available for option +E223 and +F316.

### Scalar and vector control for process control

- Scalar control for effortless process control
- Vector control for accurate speed and torque control in demanding applications
- Support for induction, permanent magnet and synchronous reluctance motors (SynRM)

### Extensive I/O connections

- The ACS580 features extensive I/O connections for flexible configuration in various applications
- Colored and bigger terminals for easy commissioning and diagnostics

### Assistant control panel and primary settings

- The ACS-AP-S assistant control panel speaks your language
- USB interface for PC and tool connection
- Help button for problem-solving and immediate diagnostics

### Integrated safe torque off (STO)

- Safe torque off for implementing safe machinery
- SIL 3, PL e

### Brake chopper

- The brake chopper is built-in as standard for ACS580 frames up to R3. Braking control is integrated into ACS580 drives.
- Optional external brake chopper can be added for the frames R4-R9.

### Performance

The ACS580 is suitable for various types of applications, including constant torque, linear and variable torque applications.

## Shared features of the ABB all-compatible drives portfolio

### Same user interface

The drives follow the same operation logic and yet, there is an optimal drive from the smallest water pump to the biggest cement kiln, and everything in the between. When you have learned to use one drive, it is easy to use other drives in the portfolio.

### Same PC tools

Free Drive Composer entry available at [www.abb.com](http://www.abb.com).

### Simple connectivity

- The ACS580 supports F-series fieldbus adapters used in the ABB all-compatible platform
- Mobile phone connectivity via the optional Bluetooth assistant control panel
- Fieldbus settings are made easy with the redesigned simple settings menu

The same parameter structure makes the all-compatible platform easy to use.

## Standard ACS580 drives software with versatile features

**Save commissioning and learning time** with the assistant control panel's clear and intuitive user interface and different assistants.

**Improve the performance of the motor and process** with sophisticated process control in scalar and vector control modes. The drive supports a wide range of motors, including induction and permanent magnet motors.

**Analyze and optimize the application** with the load profile log, which shows how the drive is operating.

**Reduce motor noise** with spreading the switching frequencies over a user-specified range.

**Reduce costs** with the built-in and standalone process PID. It makes the ACS580 a self-governing unit requiring only an external process measurement. No external logic input from the control room is needed.

**Scale up and customize** the drive to your application's requirements with flexible parameter pointers or adaptive programming.

**Optimize energy efficiency** with features that help you to save and manage energy. You can monitor the hourly, daily and cumulative energy consumption via kWh counters.

**Analyze and resolve issues** with the control panel's diagnostics menu. You can quickly analyze why the drive is performing as it is, whether running, stopped or running at the present speed.

# Standard interface and extensions for plug-in connectivity

ACS580 drives offer a wide range of standard interfaces. In addition, the drive has two option slots that can be used for extensions, including fieldbus adapters and input/output extension modules that allow an external +24 V supply with frame sizes R1 to R5. For frames R6-R11 external +24 V terminals are already integrated on the control board. For further information, please see the ACS580 user manual.

1. Panel port (PC tools, control panel)
2. ABB drive customizer port for programming the drive without mains
3. Analog inputs (2 × AI)
4. Analog outputs (2 × AO)
5. 24 V AC/DC output
6. Digital inputs (6 × DI)
7. Safe torque off (STO)
8. Embedded fieldbus
9. Communication options (fieldbuses)
10. I/O extensions
11. Relay outputs (3 × RO)
12. Mains connection
13. Motor connection

## EU Ecodesign Regulation

The EU has agreed upon new, more demanding regulation (EU) 2019/1781, replacing regulation 640/2009. The new Ecodesign Regulation (EU) 2019/1781 sets the minimum efficiency levels not only for direct-on-line rated low voltage induction motors but now also for variable speed drives with a voltage up to 1000 V. The regulation will be implemented in two steps July 1, 2021 and July 1, 2023.

### Variable speed drives

#### Step 1: July 1, 2021

##### IE2 efficiency level mandatory for AC drives

- Power range from 0.12 to 1000 kW.
- 3-phase drives with diode rectifier including ABB's micro, machinery, general purpose, industrial and industry-specific drives.
- Drive manufacturers must declare power losses in percentage of the rated apparent output power at 8 different operating points as well as standby losses. The international IE level is given at the nominal point. Drives fulfilling the requirements will be CE marked.
- All the covered ABB products fulfill the requirements.

##### Excluded from the regulation:

- All drives without CE marking
- Following low voltage AC drives: regenerative drives, low-harmonic drives (THD < 10%), multiple AC-output drives and single-phase drives.
- Drive cabinets with already conformity assessed modules
- Medium voltage drives, DC drives and traction drives

#### Markings on the ABB AC drives

Unique identifier QR code to Ecodesign information

IE class and % loss of rated apparent power 50 Hz, 400 V

IE2 (90;100) 2,3 %

Unique QR codes are located on the rating plate and/or the front side of the drive.

#### Step 2: July 1, 2023

No changes for drives from July 1, 2021

## Nominal ratings, ACS580-01

|       |                                                                        |
|-------|------------------------------------------------------------------------|
| $I_N$ | Rated current available continuously without overloadability at 40 °C. |
| $P_N$ | Typical motor power in no-overload use.                                |

## Maximum output current

|           |                                                           |
|-----------|-----------------------------------------------------------|
| $I_{max}$ | Maximum output current. Available for 2 seconds at start. |
|-----------|-----------------------------------------------------------|

## Light-overload use

|          |                                                                                   |
|----------|-----------------------------------------------------------------------------------|
| $I_{Ld}$ | Continuous current allowing 110% $I_{Ld}$ for 1 minute every 10 minutes at 40 °C. |
| $P_{Ld}$ | Typical motor power in light-duty use.                                            |

## Heavy-duty use

|          |                                                                                                                                                                                                                                                                                          |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| $I_{Hd}$ | Continuous current allowing 150% $I_{Hd}$ for 1 minute every 10 minutes at 40 °C.<br><sup>*)</sup> Continuous current allowing 130% $I_{Hd}$ for 1 minute every 10 minutes at 40 °C.<br><sup>**)</sup> Continuous current allowing 125% $I_{Hd}$ for 1 minute every 10 minutes at 40 °C. |
| $P_{Hd}$ | Typical motor power in heavy-duty use.                                                                                                                                                                                                                                                   |

The ratings apply for the frames R1 to R9 up to +40 °C in enclosure class 21.

The ratings apply for the frames R10 to R11 up to +40 °C in enclosure class IP00/IP20.

For derating at higher altitudes, temperatures, switching frequencies or enclosure classes, see the HW manuals, document codes: 3AXD50000018826 and 3AXD50000015497.

| $P_{Hd}$ | Typical motor power in heavy-duty use.                                                                                                                                                                                                                                                                                                                       |

The ratings apply for the frames R6 to R9 up to +40 °C in enclosed IP class 21.

The ratings apply for the frames R10 to R11 up to +40 °C in enclosed IP00/IP20.

For derating at higher altitudes, temperatures or switching frequencies, see the HW manuals, document codes: 3AXD50000018826, 3AXD50000015497, 3AXD50000045815 and 3AXD50000032622.

## Ratings, types and voltages

3-phase,  $U_N = 230$  V (range 200 to 240 V). The power ratings are valid at nominal voltage 230 V (0.75 to 75 kW)

| ACS580-01-213A-2 | R7         | 213             | 55            | 211             | 55               | 169             | 45               | 304                    |
| ACS580-01-276A-2 | R8         | 276             | 75            | 273             | 75               | 211             | 55               | 380                    |

### Nominal ratings

|       |                                                                        |
|-------|------------------------------------------------------------------------|
| $I_N$ | Rated current available continuously without overloadability at 40 °C. |
| $P_N$ | Typical motor power in no-overload use.                                |

### Maximum output current

|           |                                                                                                         |
|-----------|---------------------------------------------------------------------------------------------------------|
| $I_{max}$ | Maximum output current. Available for 2 seconds at start, then as long as allowed by drive temperature. |
|-----------|---------------------------------------------------------------------------------------------------------|

### Light-overload use

|          |                                                                                   |
|----------|-----------------------------------------------------------------------------------|
| $I_{Ld}$ | Continuous current allowing 110% $I_{Ld}$ for 1 minute every 10 minutes at 40 °C. |
| $P_{Ld}$ | Typical motor power in light-overload use.                                        |

The ratings apply for the frames R1 to R9 up to +40 °C in enclosed IP21/IP55.

For derating at high altitudes, temperatures or switching frequencies, see the user's HW manual, document code: 3AXD50000035866.

### Overloadability and output current illustration

| Definition                       | ACS580   |
|----------------------------------|----------|
| No overload                      | $I_n$    |
| 110% overload 1 min / 10 minutes | $I_{Ld}$ |
| 150% overload 1 min / 10 minutes | $I_{hd}$ |

# Easiness on a whole new level

The assistant control panel's intuitive user interface, assistants and ready-made macros offer simplicity for everyday life.

The panel guides you through commissioning without a need to know any drive parameters and helps in unclear situations.

## Assistant control panel, ACS-AP-S

Set up the drive, fine-tune motor control and monitor values that matter using the assistant control panel, delivered as standard with all ACS580 drives. The assistant control panel can also be used with the ACS480 and the ACS380.

### Commission without a hassle

Select language, set time and date, name the drive, enter motor values, test rotating the motor.

### Primary settings

Select ready-made macros, perform ID-run, fine-tune settings related to e.g. ramps, limits, PID's, fieldbuses, reset to defaults.

### Input/output menu

Set and monitor your input/output (I/O) connections for real-time diagnostics

### Home view displays

Monitor the values that are the most important to you. You can select values for monitoring from a ready-made list or choose user-defined parameters.

### Help button

The help button provides more information about your selection and it can be pressed in any view.

## Control panel options and mounting kits

The standard delivery of the ACS580 includes the assistant control panel (requires the +J400 code), but it can be also replaced by other control panels.

### Bluetooth control panel, ACS-AP-W \*)

The optional Bluetooth panel enables connection with the Drivetune mobile app. The app is available for free from Google Play and the Apple App store. Together with the Drivetune app and the Bluetooth panel, users can, for example, commission and monitor the drive remotely.

### Control panel mounting platform, DPMP-01

This mounting platform is for surface mountings. This also requires RDUM-01 (blank control panel with the RJ-45 connector) and a control panel (assistant, basic, Bluetooth or industrial).

### Industrial control panel, ACS-AP-I \*)

The industrial control panel is compatible with all ABB drives, making it simple to use a single panel with different products.

### Control panel mounting platform, DPMP-02

This mounting platform is for flush mountings. This also requires RDUM-01 (blank control panel with the RJ-45 connector) and a control panel (assistant, basic, Bluetooth or industrial).

### Basic control panel, ACS-BP-S

The icon-based control panel supports users with parameter backup, settings and fault tracking in basic operation.

### Door mounting kit, DPMP-EXT

The door mounting kit is ideal for cabinet installations. A kit for one drive includes one DPMP-02 and one CDPI-01 (blank control panel cover with RJ-45 connector). If a different control panel than the assistant panel is desired for cabinet door installation, it must be ordered separately.

### Panel bus adapter, CDPI-01

The panel bus adapter is an ideal choice if there is a need to control multiple drives with a single control panel. The panel bus adapter offers also simplicity for cabinet installations as by using it the control panel can be installed on the cabinet door and the drive can be operated easily and safely.

### Control panel mounting kit for outdoor installation DPMP-04/05

Enables control panel outdoor mounting thanks to IP66 protection class, UV resistance and IK07 impact protection rating.

### Blank control panel, CDUM-01

The blank control panel can be used for covering the control panel slot if no control panel or panel bus adapter is needed.

## Door mounting and daisy chaining

Improve safety and leverage the full potential of the ACS580 control panel options with a door mounting kit and panel bus adapter.

Door mounting fosters easy operation and safety. It enables you to operate the drive without opening the cabinet door, saving time and keeping all the electronics behind the closed door. Up to 32 drives can be connected to one

control panel for even easier and quicker operation. When daisy chaining the drives, you need only one assistant control panel. The rest of the drives can be equipped with panel bus adapters.

### Cabinet door

### Door mounting kit, DPMP-EXT

The kit includes a surface mounting platform for the drive's control panel, panel bus adapter (CDPI-01) and an RJ-45 cable for connecting the control panel and the panel bus adapter.

### Assistant control panel

The assistant control panel is delivered as standard with the ACS580 drives. Also a Bluetooth or industrial control panel can be used.

### RJ-45 cable for daisy chaining drives

### Panel bus adapter, CDPI-01

The panel bus adapter can be ordered with a plus code +J424 or with an MRP code 3AXD50000009843 as a loose option.

Cabinet, outside

Cabinet, inside

### Control panel options

The ACS-AP-S assistant control panel (plus code +J400) is included as standard in the delivery. If no code is mentioned in the ACS580 order, the assistant control panel is automatically added to the delivery. It can be replaced by one of the other +Jxxx options listed below.

| MRP code        | Plus code | Description                                                                                     | Type designation |
|-----------------|-----------|-------------------------------------------------------------------------------------------------|------------------|
| 3AUA0000064884  | +J400     | Assistant control panel **)                                                                     | ACS-AP-S         |
| 3AXD50000025965 | +J429     | Control panel with Bluetooth interface */**)                                                    | ACS-AP-W         |
| 3AUA0000088311  | +J425     | Industrial assistant control panel */**)                                                        | ACS-AP-I         |
| 3AXD50000028828 | +J404     | Basic control panel**                                                                           | ACS-BP-S         |
| 3AXD50000009843 | +J424     | Blank control panel cover (no control panel delivered)                                          | CDUM-01          |
| 3AXD50000004419 | –         | Panel bus adapter                                                                               | CDPI-01          |
| 3AUA0000108878  | –         | Control panel mounting platform (flush mounted, requires also panel bus adapter on the drive)   | DPMP-01          |
| 3AXD50000009374 | –         | Control panel mounting platform (surface mounted, requires also panel bus adapter on the drive) | DPMP-02          |
| 3AXD50000016230 | –         | Control panel mounting platform option, only for ACS580-04 modules                              | DPMP-03          |
| 3AXD50000217717 | –         | Control panel mounting kit for outdoor installation                                             | DPMP-04          |
| 3AXD50000240319 | –         | Control panel mounting kit for outdoor installation, only for ACS580-04/34                      | DPMP-05          |
| 3AXD50000010763 | –         | Door mounting kit for the panel (for one drive, contains both DPMP-02 and CDPI-01)              | DPMP-EXT         |

\*) Compatible with ACS880 drives

\*\*) Compatible with the ACS480 and ACS380

## Higher enclosure class for cabinet-free installations even in harsh conditions

Don't let dust, moisture or dirt interrupt your processes and drag down productivity. ACS580 IP55/UL Type 12 units keep your systems running even in tough conditions.

Take advantage of flexible, cabinet-free installation

Save space, increase safety and reduce overall costs

Maintain productivity in harsh conditions

Minimized downtime and flawless operation

### Compact units for rough environments

The ACS580 IP55 and UL Type 12 units are an ideal choice for harsh environments, where impurities, such as dust or dirt waft in the air. Typical harsh environments include textile, cement, metal and wood processing industries and harsh outdoor conditions in desert and tropical environments. Higher protection class ensures smooth processes by reducing downtime.

These units can be installed directly on the wall closer to the motor, which provides flexibility and simplifies installation. The robust, protective design ensures that no additional enclosures or components, such as dust filters and fans, are needed.

| Ordering codes | Description                                                |
|----------------|------------------------------------------------------------|
| +B056          | IP55/UL Type 12 unit (R1-R9)                               |
| +F278          | Integrated main switch (R1-R5) <sup>*)</sup>               |
| +E223          | Integrated C1 filter (R1-R5) <sup>*)</sup>                 |
| +F316          | Integrated main switch and C1 filter (R1-R5) <sup>*)</sup> |

<sup>\*)</sup> Integrated into the R1 and R2, external box for the R3, R4 and R5.

### Be productive, save money and keep it simple

If there's a job assignment to build an outdoor swimming pool, the construction employees need to have the right tools and equipment to be successful and productive. A shovel and garden hose are obviously not the right choice for the job. The same applies to your processes: in order to perform the job well, you need to have the right equipment for it.

If the environment around your processes includes impurities, drives with lesser enclosure ratings are more likely to fail because they are not designed for harsh environments. A failure causes an interruption and instantly cuts down productivity and adds costs. Coated control boards of the ACS580 IP55/UL Type 12 units, increased use of plastics with smart design, and fully gasketed control panel section that maintains the IP rating even if the control panel

is removed help keep your processes up and running in tough environments.

Installing the drive closer to the motor allows shorter motor cables to be used. Shorter cables not only cost less and are easier to handle, but they make it easier to fulfill EMC requirements and reduce the need for additional filters.

Cost reductions take place also by eliminating the need for a cabinet. IP55/UL Type 12 enclosure provides protection from dust and jetting water from any direction. Speed-controlled main cooling fans maintain optimal drive operating temperatures without a need for external cooling. Keeping the drive at optimal temperature increases the lifetime of the drive.

In addition, the IP55/UL Type 12 units reduce maintenance costs compared to cabinet-mounted drives because of the elimination of air filters. The cabinet air filters need to be replaced on a regular basis and if they're not cleaned or taken care of properly, the cabinet temperature may rise and cause issues in the process. In these situations a maintenance engineer may need to open the cabinet door to identify the root cause.

Exploring the root cause is extra work and an open cabinet door instantly decreases safety, exposes all the components to the impurities and interrupts your processes. All these costs can be avoided with cabinet-free installation.

#### **Integrated main switch and EMC C1 filter for further safety improvements and cost reductions**

The ACS580 IP55/UL Type 12 units can be ordered with an integrated main switch and/or EMC C1 filter (R1-R5). The integrated main switch further simplifies the installation and improves safety as it ensures a correct drive is being disconnected instead of another one. The switch can be padlocked with three padlocks and in case all padlocks are used, three people need to agree and observe together whether it is safe to connect the drive before the drive can be connected.

Having the EMC C1 filter embedded to the drive, there is no need to order, install and test it separately. The integrated filter is already tested with the drive and it is prewired so there is no need for additional cabling.

#### **Ready made accessories for simplified cabinet assembly**

Installing ACS580-01 drive modules into Rittal VX25 cabinets is made easier with mechanical and electrical accessory kits. The ready made accessories will save time in design work and reduce the building time to enable faster cabinet delivery. This will enable machine builders, system integrators and panel builders to built drive packages using their own cabinet design with ABB technology.

For more information and ordering details, please see manual supplement 3AXD50000523191.

## ACS580-07 cabinet-built drives

### Effortless process automation in a ready-made cabinet

The ACS580-07 is part of the all-compatible family and a cabinet-built extension to the ACS580 series. They are suited for many different applications, easy to use, order and maintain, and they are quickly available. The simple and robust design ensures reliable operation even in harsh environments. The cabinets are compact in size, including flange mounting (R6-R9) and optimized cooling system as standard.

**For many purposes:** The ACS580-07 is ready to control many applications including, mixers, extruders, compressors, centrifuges, and fans, also installed in potentially explosive environment.

**Easy to order:** An EMC filter, chokes, assistant control panel, Modbus RTU, STO and installation tools are included as standard, and in addition there are several options available to further fulfill your needs. (See page 57)

**Fast to get:** Cabinet-built ACS580-07 drives are delivered fast from the factory.

**Easy to use:** Application control is easy to setup through the assistant control panel. Also other all-compatible ACS580 user interfaces can be used with the ACS580-07. (See page 25)

**Easy to maintain:** Smartly positioned fans and filters ensure the longevity of the drive and its components. When it is time to do maintenance, the necessary components are in easily accessible locations.

**EMC tested:** All cabinet-built ACS580-07 drives are tested by 3<sup>rd</sup> party facilities and have certified results for emitted radiations in accordance to IEC 61800-3ED.2:2004+A1(2011). R6-R9 are classified as C2 and R10-R11 as C3.

**Thermal tested:** The thermal properties are tested in accordance to IEC 61800-5-1:2007 and UL61800-5-1 1<sup>st</sup> ed. 2012 standards to ensure the environment and operators stay safe in all operating conditions. Be it a premature fan failure or clogged environmental filters to restrict the cooling capabilities, the tests verify that the equipment is self-protecting it at all times.

**Adaptable to harsh environments:** High enclosure classes and unique cooling system ensure the units stay cool even in harsh environments with air pollution.

**Factory acceptance test (FAT):** For ABB the reliability and quality of the drives is the utmost important. To ensure that the drive solutions meet the specifications and the customer expectations, ABB offers to have a factory acceptance test (FAT) in drives factory. Remote FAT or visual inspection is possible via online services.

## Frame sizes R6-R9

## Frame sizes R10-R11

### Cabinet components

1. Module
2. Main switch or MCC8, option +F289
3. Fuses
4. Space for optional du/dt filter or cabinet resistors
5. Space for a line contactor option +F250
6. Common mode filter allocation
7. Space for safety, ATEX or external power supply options
8. Space for options +M600...+M605

### Maintenance operation components

- A Main fans
- B Auxiliary fans
- C Capacitors (inside the module)
- D Rails and ramp supporting maintenance operation
- E Filters for dust and external components
- F Other supporting fans for R10 and R11
- G Roof top for R10 and R11 (only IP54)

## Commissioning, programming and customization tools

Your engineering efficiency is boosted with our commissioning and programming tools, giving you the optimal solution to perform virtualization, planning, commissioning and maintenance.

### Safe configuration for unpowered drives

The CCA-01 cold configuration adapter provides a serial communication interface for unpowered ACS580 drives. With the adapter, safety isolation of both serial communication and control board power supply is possible. The power supply is taken from a PC USB port.

#### Cold configurator

Users can download the software and parameters to drives without powering the drive.

| MRP code        | Description                           | Type designation |
|-----------------|---------------------------------------|------------------|
| 3AXD50000019865 | Cold configurator adapter, packed kit | CCA-01           |

### Drive Composer

The Drive Composer PC tool offers fast and harmonized setup, commissioning and monitoring for all-compatible drives. The free version of the tool provides startup and maintenance capabilities and gathers all drive information, such as parameter loggers, faults, backups and lists, into a support diagnostics file. Drive Composer pro provides additional features such as custom parameter windows, graphical control diagrams of the drive's configuration, and improved monitoring and diagnostics.

| Drive Composer | Entry level (free)                | Pro level                                  |
|----------------|-----------------------------------|--------------------------------------------|
|                | Basic functionality               | Entry-level features                       |
|                | Parameter setting                 | Networked drives                           |
|                | Point-to-point connection         | Control diagrams                           |
|                | Simple monitoring                 | Data logger(s)                             |
|                | Supports adaptive programming     | Graphical safety setup                     |
|                | Adaptive programming in Demo mode | Adaptive (block) programming               |

### Automation Builder

ABB Automation Builder is the integrated software suite for machine builders and system integrators wanting to automate their machines and systems in a productive way. Combining the tools required for configuring, programming, debugging and maintaining automation projects in a common, intuitive interface, Automation Builder addresses the largest single cost element of most of today's industrial automation projects: software.

### Automation Builder

ABB Automation Builder covers the engineering of ABB PLCs, safety PLCs, control panels, drives, motion and robots.

The common engineering tool Automation Builder is used for drive and PLC programming and configuration.

Automation Builder is available in Basic, Standard and Premium editions, fitting the needs of small projects and managing the challenges of many and large projects for OEM and system integrators.

### Adaptive programming

Adaptive programming software, embedded inside the drive, is especially handy when there is a need to distribute some of the machine's control logic to the drive. Adaptive programming brings energy savings when the drive is adjusted to control the application optimally. You can use our Drive Composer PC tool to set up the adaptive programming. The drive also offers sequence programming capabilities. Adaptive programming makes it possible to enhance the existing application control program to precisely fit users' application needs. The program is also handy for ensuring that the drive's electrical design is connected as it should be with working drive signals.

### Adaptive programming

### Drive manager

Drive Manager for SIMATIC (DM4S-01) is a plug-in device tool that can be easily installed, for example, in the STEP 7 and TIA Portal. It utilizes the TCI interface of the SIMATIC PLC to communicate with drives connected to PROFIBUS or a PROFINET network.

Drive Manager for SIMATIC offers several useful, ready-made features that simplify the setup of ABB low voltage drives used in combination, for example, with SIMATIC S7 PLCs including:

- Network connection over PROFIBUS and PROFINET (single point of access)
- Online and offline configuration of drives
- Monitoring of actual drive values
- Export to/import from the drive-dedicated PC tools
- Saving drive parameter settings within the SIMATIC PLC project

### Drive manager

# Communication and connectivity

## Fast and reliable communication

The **F-series fieldbus adapter modules** are flexible, plug-in adapters that provide fast and simple universal connectivity to all major controllers. Universal connectivity means ABB low voltage drives connect to automation controllers and communication networks, allowing users to choose the best network to meet their needs.

- Reduces mechanical and electrical cost
- Decrease in downtime
- Increase in productivity
- Diminished start-up costs
- Lower maintenance and diagnostic costs
- Quick access to networked drives with PC-based start-up and maintenance software tools
- Reductions in wiring costs compared to traditional I/O connections

### Industrial automation plant – different network possibilities and their secure deployment

1. Local connections (point-to-point serial communication, e.g. USB) or
2. Shared (with control) upper-level physical fieldbus network (e.g., PROFINET) using Ethernet tool communication and/or
3. Communicating also through PLC system using Drive Manager device tool or
4. NETA-21 remote monitoring tool web interface or
5. NETA-21 acting as a gateway between or
6. Third-party remote desktop connection.

# Communication and connectivity

## Options

### Fieldbus adapter modules

The ACS580 comes with Modbus RTU fieldbus interface as standard, and it is also compatible with a wide range of additional fieldbus protocols. Fieldbus communication reduces wiring costs compared to traditional hardwired input/output connections. The fieldbus options can be installed into a slot one (1).

### Input/output extension modules

Standard input and output can be extended by using optional analog and digital input/output extension modules. The modules are easily installed in the extension slot two (2) located on the drive.

### Fieldbus options

\*) For further information please see pages 44-45.

\*\*) No additional analog input/output is offered

## Safety options

### Integrated safety

Integrated safety reduces the need for external safety components, simplifying configuration and reducing installation space. The safety functionality is a built-in feature of the ACS580, with safe torque off (STO) as standard. ACS580 can also be part of PROFIsafe over PROFINET network, where safety PLC is controlling the STO or safe stop 1, time controlled, SS1-t functionality. This connectivity and functionality can be done by using the FSPS-21 option module.

The drives' functional safety is designed in accordance with EN/IEC 61800-5-2 and complies with the requirements of the European Union Machinery Directive (2006/42/EC). The safety functions are certified by TÜV Nord and comply with the highest safety performance level (SIL 3/PL e) for machinery safety. It is possible to install the safety modules also afterwards to the drive.

### PROFIsafe safety functions module FSPS-21

The FSPS-21 module has integrated PROFIsafe, safety functions and PROFINET IO connection. The ready-made safety functions make safety configuration in the drive unnecessary. The module supports STO and SS1-t safety functions. It is used together with a safety PLC that supports PROFIsafe over PROFINET communication.

For more information see FSPS-21 PROFIsafe safety functions module web page at [new.abb.com/drives/functional-safety](http://new.abb.com/drives/functional-safety)

### Safe torque off (STO)

STO is the basic foundation of drive-based functional safety, as it brings a drive safely to no-torque state making the motor coast to stop. Integrated STO-function simplifies the safety circuit as external components are not needed to safely stop the application.

- **STO** is a standard safety function in all ABB drives.
- Typically used for prevention of an unexpected startup
- (EN ISO 14118) of machinery or for an emergency stop, fulfilling stop category 0 (EN 13850 / IEC 60204-1).

### Safe stop 1, time controlled (SS1-t)

Safe stop 1 stops the motor safely with a controlled ramp stop and stop time monitoring. SS1-t initiates the ramp stop from the drive and activates STO when speed reaches zero. If the drive is not decelerating to zero speed within the time limit, the STO function is activated. SS1-t is typically used in applications where motion must be stopped quickly and safely before switching to a no-torque state.

- **SS1-t** stops the motor safely, using a controlled ramp stop and then activates the STO function.
- **SS1-t** can be used to implement an Emergency stop, fulfilling stop category 1 (EN/IEC 60204-1).

### PROFIsafe safety functions module FSPS-21

| Option code | Ordering code   | Module  |
|-------------|-----------------|---------|
| +Q986       | 3AXD50000112821 | FSPS-21 |

Note: This module isn't compatible with other fieldbus option modules for ACS380 and ACS580 drives

## Example: SS1-t

### Safety function module FSPS-21, functionality cycle

#### 0. Drive running

#### 1. Safety PLC – safety function request to the FSPS-21

#### 2. SS1-t, safety functions request / start of monitoring

#### 3. Transition and time monitoring of the SS1-t

#### 4. Zero speed or SS1-t time limit reached / STO is opened

#### 5. Safe state / STO is open

#### 6. Safety function request removed / reset / STO is closed

#### 7. Start – return to normal operation

\*) The ABB drive can be ACS380, ACS580 or ACS880

# ABB Ability™ Digital Powertrain

## Condition monitoring for drives

Accurate, real-time information about powertrain events. When you have the facts, you can make the right decisions.

Condition Monitoring gives you fact-based insight into your powertrain assets, such as drives and motors, via KPIs and signal data, to identify irregularities before they become problems. This helps you make proactive decisions, built on real-time information – and saves you money!

### The service can be tailored to fit your needs

Our standard package gives you industry leading monitoring capabilities – whether you want to view the drive status through ABB's Internet portal or integrate this data with your existing monitoring systems.

### The standard package includes the following services:

- Condition Monitoring
- Alarm Management
- Asset Health
- Team Support
- Backup Management

### The standard package can be supplemented with optional services:

- Offline Data Collection
- Expert Reports
- Remote Assistance
- Condition monitoring of your entire powertrain

### Solid fact-based decision making

Get the facts, and the history, to help run your operations better and more safely.

### Always stay one step ahead of problems

Recognize early signs of possible failures and assess the risks, before they turn into serious operational issues.

### Find the root cause of process issues

Remotely access data from ABB drives built-in sensors to track the cause of problems. Get back to smooth operation quickly with data back-ups.

### Remotely analyze and optimize drives

Get critical drive information anywhere anytime – even in difficult to access sites, or when a site visit is impossible.

## NETA-21

NETA-21 connects the drive to the cloud via the Internet or local Ethernet network.

- The module comes with a built-in web server and requires no Flash/Java plugins
- In the absence of a customer local area network, it can be connected via a mobile network router (either Ethernet or USB network adapter)
- One module can be connected to several drives at the same time

| NETA-21                                                                            | Ordering code  | Description             |
|------------------------------------------------------------------------------------|----------------|-------------------------|
|  | 3AUA0000094517 | 2 x panel bus interface |
|                                                                                    |                | max. 9 drives           |
|                                                                                    |                | 2 x Ethernet interface  |
|                                                                                    |                | SD memory card          |

## RMDE reliability monitoring device

The RMDE reliability monitoring device facilitates the installation of the connectivity device (NETA-21) on drives that are already installed.

- The RMDE device can contain two or four NETA modules and can connect up to 18 or even 36 drives
- The cabinet consists of the NETA-21 connectivity devices, a modem and environmental sensors that enable the collection of measured ambient temperature and humidity values
- The cabinet includes a compact IP54 enclosure, making it suitable even for harsh environments

## Customers can configure powertrains and customize the digital service plan

# EMC – electromagnetic compatibility

## What is EMC?

EMC stands for electromagnetic compatibility. It is the ability of electrical/electronic equipment to operate without problems in an electromagnetic environment.

Likewise, the equipment must not disturb or interfere with any other product or system in its locality. This is a legal requirement for all equipment taken into service within the European Economic Area (EEA).

## Installation environments

A power drive system (PDS) can be connected to either industrial or public power distribution networks. The environment class depends on the way the PDS is connected to power supply.

The **1<sup>st</sup> environment** includes domestic premises. It also includes establishments directly connected without an intermediate transformer to a low voltage power supply network that supplies buildings used for domestic purposes.

The **2<sup>nd</sup> environment** includes all establishments directly connected to public low voltage power supply networks.

## EMC solutions

To fulfill the EMC requirements, the drives are equipped with standard or optional RFI filtering for HF disturbances.

- Using ferrite rings in power connection points
- Using an AC or DC choke (while they are meant to protect against harmonics, they reduce HF disturbances as well)
- Using an LCL filter in the case of regenerative drives
- Using a du/dt filter

## Immunity and emission compatibility

## Installation environments

The product standard EN 61800-3 divides PDSs into four categories according to the intended use

### C1 – 1<sup>st</sup> environment

- Household appliances
- Usually plug connectible to any wall outlet
- Anyone can connect these to the network
- Examples: washing machines, TV sets, computers, microwave ovens, etc.

### C2 – 1<sup>st</sup> environment

- Fixed household and public appliances
- Need to be installed or operated by a professional
- Examples: elevators, rooftop fans, residential booster pumps, gates and barriers, supermarket freezers, etc.

### C3 – 2<sup>nd</sup> environment

- Professional equipment
- Needs to be installed or operated by a professional
- In some rare cases, may also be pluggable
- Examples: any equipment for industrial usage only, such as conveyors, mixers, etc.

### C4 – 2<sup>nd</sup> environment

- Professional equipment
- Needs to be fixed installation and operated by a professional
- Examples: paper machines, rolling mills, etc.

Every ACS580 drive is equipped with a built-in filter to reduce high-frequency emissions.

EMC product standard (EN 61800-3) category C2 is fulfilled in wall-mounted drives and in cabinet-built drives up to frame size R9. Category C3 is fulfilled in drive modules and cabinet-built drives (frames R10 and R11) with no external filters.

#### Comparison of EMC standards

| EN 61800-3, product standard | EN 61800-3, product standard                           | EN 55011, product family standard for industrial, scientific and medical (ISM) equipment | EN 6100-6-4, generic emission standard for industrial environments | EN 61000-6-3, generic emission standard for residential, commercial and light-industrial environments |
|------------------------------|--------------------------------------------------------|------------------------------------------------------------------------------------------|--------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------|
| Category C1                  | 1 <sup>st</sup> environment, unrestricted distribution | Group 1. <sup>\*)</sup> Motor cable operational functionality up to 300 m. See ACS580 hardware manuals 3AXD50000018826, 3AXD50000015497, 3AXD50000045815 and 3AXD50000032622 for frame specific information.

# Harmonic mitigation

## What are harmonics?

Harmonic currents are created by non-linear loads connected to the power distribution system. Harmonic distortion is a form of pollution in the electric plant that can cause problems if the voltage distribution caused by harmonic currents increases above certain limits.

All power electronic converters used in different types of electronic systems can increase harmonic disturbances by injecting harmonic currents directly into the grid.

Electricity supply is hardly ever a pure sine wave voltage, and current that deviates from the sine form contains harmonics. The distortion is caused by non-linear loads connected to the electrical supply. Harmonics cause disturbances and equipment failures.

The total current as the sum of the fundamental and 5<sup>th</sup> harmonics

## Where do the harmonics come from?

### Non-linear loads such as:

- Variable speed drives
- Uninterrupted power supplies (UPS)
- Industrial rectifiers
- Welding machines
- Fluorescent lighting systems (electronic ballast)
- Computers
- Printers
- Servers
- Electronic appliances

- Point of common coupling (PCC) is the point where the harmonic distortion is specified, e.g.
  - between the plant and the utility network (PCC1)
  - between the non-linear load and other loads within an industrial plant (PCC 2)

- In-plant point of coupling (IPC) is the point inside the customer system or installation to be studied

## The effects of harmonic distortions

### Harmonic currents

- Mainly affect the power distribution system up to the rectifier:
- Additional losses in wires and cables
  - Extra heating of transformers
  - Circuit breaker malfunctioning

### Harmonic voltage

- Can affect other equipment connected to the electrical system:
- Erratic operation of telecommunication systems, computers, video monitors, electronic test equipment, etc.
  - Resonance with power factor correction capacitors

ACS580 drives are compliant with EN 61000-3-12. They are equipped with:

- optimized DC choke (R1-R9)
- AC chokes (R10-R11)

By choosing the ACS580, you can automatically make your plant more reliable. Built-in chokes mitigate harmonics reducing disturbances and equipment failures. Smaller harmonic content also saves money and makes the installation easier because it allows smaller fuses and longer motor cables to be used. Less harmonics also means longer lifetime for the components and thus less maintenance needs and downtime.

**Reliable operation**

**Reduced cost**

**Longer lifetime**

#### Drive system features affecting harmonics

Harmonics reduction can be achieved either by structural modifications in the drive system or by using external filtering. The structural modifications may be to strengthen the supply, or to use 12 or more pulse drives, to use a controlled rectifier, or to improve the internal filtering in the drive.

The image to the left shows the factors in the AC drive system that have some influence on harmonics. The current harmonics depend on the drive construction, and the voltage harmonics are the current harmonics multiplied by the supply impedances.

**For explosive atmospheres**  
ATEX certified

## What is a potentially explosive atmosphere and where can it be?

Explosive atmospheres occur when flammable gases, mist, vapors or dust are mixed with air, which creates a risk of explosion. A potentially explosive area is defined as a location where there is a risk of flammable mixes. These atmospheres can be found throughout industries, from **chemical, pharmaceutical and food**, to **power and wood processing**. The electrical equipment that is installed in such locations must be designed and tested to endure these conditions and guarantee a safe function.

## What does ATEX mean?

The term ATEX comes from the French words “ATmosphères EXplosibles”, and it is a combination of two EU directives: the Worker Protection Directive 1999/92/EC and the Product Directive 2014/34/EU.

**The ATEX Directives are designed to protect employees, the public and the environment from accidents owing to explosive atmospheres.**

ATEX provides similar guidelines to the IECEx System, with a few exceptions, and with certification of protective devices (e.g. drive-integrated safety functions).

## How to ensure safe operation?

**With ABB's ATEX-certified offering and services, safe operation can be ensured.**

Motors are directly connected to the machines in the potentially explosive atmosphere, and certain issues need to be considered when selecting a motor together with a drive. These atmospheres have a defined zone classification, and the zone defines the minimum requirements (category) the motors must comply with. The category defines the permitted motor protection types.

### Potentially explosive atmosphere zones

Within industries, all potentially explosive atmospheres are required to have an area classification called Zones. Globally, a Zone system is used to classify potentially explosive areas. The Worker Protection Directive 1999/92/EC and the EU standards IEC 60079-10-x, EN 60079-10-x define these zones. In all cases, the owner of the site where the potentially explosive atmosphere exists has the responsibility to define the zones according to the requirements.

### Tested packages

Motor and drive combinations are **tested and certified in ABB's test center**. By using an ABB motor together with an ABB drive as a package, you can enjoy the benefits of efficient, high-performance motors with optimal speed and control accuracy – without compromising on safety.

With the ABB ATEX certified motor and drive package the ATEX certified temperature protection modules are not obligatory, the tested combinations fulfill the IEC/ATEX standards and ensure safe performance.

- No additional testing and certification are needed
- No ATEX thermistor protection modules are needed
- Safe and cost effective solution for industries in potentially explosive atmospheres

### Safe temperature monitoring

For non-tested and certified motors and drives (e.g. for use with other manufacturer's motors), ATEX certified temperature protection is an integrated option.

The ACS580's ATEX-certified thermistor protection module, Ex II (2) GD, CPTC-02, can be integrated into the drive if the motor is operating in a potentially explosive environment. **The purpose of the safety function is to disconnect the motor from the power supply before the motor overheats and causes a risk of explosion in an ATEX environment.**

### Correct dimensioning

Correct dimensioning is important. **Correctly sized motors and drives reduce motor frame heating and sparks from bearing currents.** They also help to reduce energy use.

### Insulation and drive filters

ABB's offering for correct insulation and filters **protects the motor** from voltage phenomena, bearing currents and motor overheating. The insulation and filters must be selected according to voltage and frame size.

### Easy drive upgrades

With the drive upgrades below, the ATEX certification stays valid from the old to the new generation models. This means that there is no need for new ATEX certification during the upgrade. This saves you time and money.

| ATEX certification approved – old generation model | Comparable converter upgrade | ATEX certification stays valid – new generation model |
|----------------------------------------------------|------------------------------|-------------------------------------------------------|
| ACS550                                             | →                            | ACS580                                                |

### Global service and support network

ABB's global network of certified service providers are trained and experienced to help you with motors and drives for applications in explosive atmospheres.

### The support network ensures that your ABB Declaration of Conformity is retained.

#### ABB's ATEX-certified thermistor protection module, Ex II (2) GD, CPTC-02

With option +L537 +Q971:

1. Motor temperature rises above the PTC sensor limit temperature.
2. The sensor resistance increases very sharply and indicates overheating to the ATEX-certified module, Ex II (2) GD.
3. The module switches the STO (safe torque off) circuit off, which activates the STO function.
4. The STO function disables the control voltage in the power semiconductors of the drive output stage.
5. The drive is prevented from generating the required torque to rotate the motor.

► The safe state is guaranteed

#### Note:

The CPTC-02 module can be managed as a loose option and can also be retrofitted to the drive; in this case, to be compliant with regulations, the customer must ensure the following requirements:

- that the serial number of the drive/inverter module starts with 1, 4, 7, 8 or Y
- that the drive and option serial number is paired in a DIB (Drive Installed Base) portal
- that the included ATEX label for the SMT (Safe Motor Temperature) function is attached to the drive/inverter module to ensure the ATEX compliance of the safety circuit
- that the option module is installed in an option slot of the drive control unit and the applicable drive parameters are set
- that the PTC temperature sensors of the motor are connected to the PTC inputs of the option module.

\*For further information please contact local ABB

| +Q971       | –               | ATEX-certified Safe Disconnection Function, Ex II (2) GD                                          |

## Cooling and fuses

### Cooling

ACS580 drives are fitted with variable-speed cooling air fans. The cooling air must be free from corrosive materials and not exceed the maximum ambient temperature of 40 °C for frames R1 to R9 (50 °C with derating). The speed-controlled fans cool the drive only when needed, which reduces overall noise level and energy consumption.

### Fuse connections

Standard fuses can be used with ABB general purpose drives. For input fuses, see the table below.

## Wall-mounted drives, ACS580-01

Cooling air flow and recommended input protection fuses for 380 to 480 V units

| Type designation | Frame size | Cooling air flow 380 to 480 V units |          |                                            |                      | Recommended input protection fuses for 380 to 480 V units***) |           |          |            |

\*) Heat dissipation value is a reference for cabinet thermal design. According to Ecodesign regulations.

\*\*) The maximum noise level at full fan speed. When the drive is not operating at full load and at maximum ambient temperature the noise level is lower.

\*\*\*) For detailed fuse sizes and types, please see the ACS580 HW manuals, document codes: 3AXD50000018826, 3AXD50000015497, 3AXD50000045815 and 3AXD50000032622.

## Sine filters

Sine filters are low-pass filters that suppress the high frequency components of the drive output.

A sine filter consists of single- or three-phase reactors and delta- or star-connected capacitors. The sine filter provides true sinusoidal voltage waveform at the drive output by suppressing the high frequency voltage components of the drive output. Suppression of the high frequency voltage components is needed when extra-long motor cables are used, there is a step-up transformer between the drive and a motor, or when a drive is installed with an old direct-on-line motor.

| ACS580-01, sine filters                                                                              |                               |                                   |                               |

\*) If a sinus filter IP21 is needed please order both type codes for Housing case IP21 and Sine filter IP00.

Example: if a IP21 sine filter is needed for an ACS580-01-02A7-4 it is necessary to order both B84143V0004R229 and B84143Q0002R229.

# ACS580 drives are compatible with the wide ABB product offering

## Programmable Logic Controllers, PLCs

The AC500, AC500-eCo, AC500-S and AC500-XC scalable PLC ranges provide solutions for small, medium and high-end applications. Our AC500 PLC platform offers different performance levels and is the ideal choice for high availability, extreme environments, condition monitoring, motion control or safety solutions.

## All-compatible drives portfolio

The all-compatible drives share the same architecture: software platform, tools, user interfaces and options. There is an optimal drive from the smallest water pump to the biggest cement kiln, and everything in between.

## AC motors

ABB's low voltage AC motors are designed to save energy, reduce operating costs and minimize unscheduled downtime. General performance motors ensure convenience, while process performance motors provide a broad set of motors for the process industries and heavy-duty applications.

## Automation Builder Engineering suite

ABB Automation Builder is the software for machine builders and system integrators wanting to automate their machines and systems in a unified and efficient way. Automation Builder connects the engineering tools for PLC, safety, control panels, SCADA, drives, motion and robots.

## Control panels

CP600-eCo, CP600 and CP600-Pro control panels offer a wide range of features and functionalities for maximum operability. ABB control panels are distinguished by their robustness and high usability, providing all the relevant information from production plants and machines at a single touch.

## Jokab safety products

ABB Jokab Safety offers an extensive range of innovative products and solutions for machine safety systems. It is represented in standardization organizations for machine safety and works daily with the practical application of safety requirements in combination with production requirements.

## Choose the right motor for your application

Choose the best motor for your application. A natural match for induction motors, ABB general purpose drives can also control high-efficiency motors such as permanent magnet or synchronous reluctance motors for greater efficiency.

### **Induction motors, the industry workhorse**

Pair the ACS480 or ACS580 with an induction motor (IM) for simple and reliable operation in many applications and in a wide range of environments. Further simplifying setup, the general purpose drives can be integrated with virtually any type of IM by entering the nameplate motor data only.

### **Permanent magnet motors for smooth operation**

Permanent magnet technology is used for improved motor characteristics in terms of energy efficiency and compactness. This technology is particularly well-suited for low speed control applications, as they eliminate the need to use gear boxes. Even without speed or rotor position sensors, the ACS480 or ACS580 drives control most types of permanent magnet motors.

### **IE5 SynRM for optimized energy efficiency**

Combining ABB's general purpose drive control technology with our synchronous reluctance motors will give you a motor and a drive package that ensures high energy efficiency, reduces motor temperatures, and provides a significant reduction in motor noise. The key is in the efficiency-optimized rotor design of our SynRM motors.

## Synchronous reluctance motors

Ultimate efficiency and reliability to optimize your cost of ownership

Traditional induction motor

IE5 SynRM motor

Losses IM vs SynRM

### Innovation inside

The idea is simple. Take a conventional, proven stator technology and an innovative rotor design. Then combine them with an ABB general purpose drive loaded with software with versatile features. Finally, optimize the whole package for applications such as compressors, conveyors, mixers, pumps, centrifuges, fans and many other variable and constant torque applications.

### Magnet-free design

Synchronous reluctance technology combines the performance of a permanent magnet motor with the simplicity and service-friendliness of an induction motor. The new rotor has neither magnets nor windings, and suffers virtually no power losses. And because there are no magnetic forces in the rotor, maintenance is as straightforward as with induction motors.

### Superior reliability to minimize the cost of not running

International Efficiency class IE5 synchronous reluctance motors (SynRM) have very low winding temperatures, which increases the reliability and lifetime of the winding. More importantly, a cool synchronous reluctance rotor means significantly lower bearing temperatures – an important factor because bearing failures cause about 70 percent of unplanned motor outages.

### Perfect for retrofits

The SynRM package is a perfect solution for motor retrofits. The IE5 SynRM is the same size as an IE3 induction motor, eliminating the need for mechanical modifications. The increased efficiency will, on the other hand, reduce the payback time of the investment.

### Full motor control, down to zero speed

Many processes require accurate speed control. SynRM always runs at reference speed with practically no error, without an encoder. Even the best slip compensation systems in an induction motor inverter will never match the precision of SynRM. Sometimes your application may require you to run your motor at slow speeds. If you are using SynRM and your drive cannot provide the necessary torque, it may trip. ABB drives provide full control and torque down to zero speed, even without speed sensors.

### For all applications

This is important if you are planning on using the motor with applications other than quadratic torque applications like pumps and fans. Our drives provide full SynRM motor control for constant torque applications such as extruders, conveyors and wire drawing machines.

| SynRM technology                       | Benefit                                      |
|----------------------------------------|----------------------------------------------|
| Higher efficiency IE5                  | Lowest energy consumption                    |
| No rare earth metals                   | Environmental sustainability                 |
| Magnet-free rotor                      | Easy service                                 |
| Lower winding and bearing temperatures | Longer life time, extended service intervals |
| Better controllability                 | Accurate speed and torque control            |
| Lower noise level                      | Better working and living environment        |
| Same size with IE3                     | Perfect for retrofits                        |

# Selection guide

## IE5 synchronous reluctance motors

This table presents performance data for IE5 SynRM motor and ACS580 drive package.

Variant codes and construction details are based on the M3BP motor, protection IP55, cooling IC 411, insulation class F, temperature rise class B.

| Output                   | Motor type *) | Product code   | Motor efficiency | Motor nominal current | Motor nominal torque | Motor weight         | Matched ACS580-01 drive | Package efficiency ** IES at nominal point (Pn) | PDS *** IES2 efficiency class low limit | Package efficiency above IES2 efficiency class low limit | Drive frame size |

## Drivetune mobile application for wireless access

User-friendly experience with Bluetooth connectivity.

**Drivetune mobile app** is a powerful tool for performing basic drive startup and troubleshooting tasks. It is possible to connect with drives and access data available in the Internet at the same time. The wireless Bluetooth

connectivity means that users won't need to enter hazardous or difficult-to-reach work areas to access information necessary to help them commission and tune the drive.

Startup, commission and tune your drive and application with full parameter access

Optimize performance via drive troubleshooting features

Create and share backups and support packages

Keep track of drives installed base

**ABB Ability™ Mobile Connect** for drives is a module in the Drivetune app. It gives you the access to the technical support for fast problem solving. Mobile Connect makes all the necessary data instantly available to the expert, providing support.

Remote and rapid access to ABB's drive experts can save you and your team considerable time, money and headaches. Check Mobile Connect availability in your country.

App Store

**Drivetune** for commissioning and managing drives

## ABB SmartGuide – ACS580

Being one of the handiest ways to get short and clear visual instructions on drive installation, startup and operation.

Mobile friendly digital user guides provide simple and animated step-by-step instructions to assist with wall mounting of drives, electrical installation and drive programming. The content is frequently updated and further developed, making it your comprehensive source of instructions and help.

## We keep your world turning

Whatever your needs are, we offer the most extensive service offering for drives, motors and generators from spare parts and technical support to cloud-based condition monitoring solutions to keep your equipment running.

The global ABB service units complemented by external Value Providers form a service network on your doorstep. Maximize performance, uptime and efficiency throughout the life cycle of your assets.

### With you every step of the way

Even before you buy a generator, drive, motor, bearing or softstarter, ABB's experts are on hand to offer technical advice from dimensioning through to potential energy saving.

When you've decided on the right product, ABB and its global network of Value Providers can help with installation and commissioning. They are also on hand to support you throughout the operation and maintenance phases of the products life cycle, providing maintenance programs tailored to your facility's needs.

ABB will ensure you are aware of any service opportunities. If you've registered your drives and motors with ABB, then its engineers will proactively contact you advising on your most effective service options. All of which helps maximize performance, uptime and efficiency throughout the lifetime of your powertrain.

### Replacements

Fast and efficient replacement services to minimize production downtime.

### End-of-life services

Responsible dismantling, recycling and reusing of products, according to local laws and industrial standards.

### Maintenance

Systematic and organized maintenance and support over the life cycle of your assets.

# ABB Drives Life Cycle Management

## A life time of peak performance

You're in control of every life cycle phase of your drives. At the heart of drive services is a four-phase product life cycle management model. This model defines the services recommended and available throughout drives lifespan.

Now it's easy for you to see the exact service and maintenance available for your drives.

## Keeping you informed throughout the life cycle

We notify you every step of the way using life cycle status statements and announcements.

Your benefit is clear information about your drives' status and precise services available. It helps you plan the preferred service actions ahead of time and make sure that continuous support is always available.

### Sales release

Details about product portfolio and release schedule.

### Sales ramp down announcement

Last time buy and last deliveries dates, informed well in advance.

### Life cycle phase change announcement

Early information about the upcoming life cycle phase change and affects on the service availability. Informed well in advance, minimum six months prior to the change.

### Life cycle phase statement

Information about the current life cycle status, product and services availability and recommended actions. Plan for the next life cycle phase transition.

# Ordering information

## How do I build an ordering code?

### ACS580-01

The type designation tells you the specifications and configuration of the drive.

The table shows the primary drive variants.

Sample type code: ACS580-01-12A7-4+XXXX

| Basic codes  |                                          |          |                                                                                                                                                                                                                                                                                                                                                                                |

## ACS580-04

The type designation tells you the specifications and configuration of the drive.

The table shows the primary drive variants.

Sample type code: ACS580-04-505A-4+XXXX

# Ordering information

## How do I build an ordering code?

### ACS580-07

The type designation tells you the specifications and configuration of the drive.

The table shows the primary drive variants.

Sample type code: ACS580-07-145A-4+XXXX

#### Basic codes

| Segment | Option         | Description                                                                                                                                                                                                                                                                                                                                    |
