

Low-voltage Capacitor

About Himel

Himel is a multinational manufacturer and provider of electrical products that successfully combines global expertise with local knowledge. We focus on long-term partnership with customers and offer products that meet real needs and ensure adequate compatibility for common usage.

Our global footprint and technology allows to provide the best combination of affordable and reliable offers for low voltage power distribution, Industrial automation and home electric in over 50 countries where we are present.

Reliable made affordable.

Reactive Power Management

In electrical networks, reactive energy results in increased line currents for a given active energy transmitted to loads.

The main consequences are:

- Need for oversizing of transmission and distribution networks by utilities,
- Increased voltage drops and sags along the distribution lines,
- Additional power losses.

This results in increased electricity bills for industrial customers because of:

- Penalties applied by most utilities on reactive energy,
- Increased overall kVA demand,
- Increased energy consumption within the installations.

Reactive energy management aims to optimize your electrical installation by reducing energy consumption, and to improve power availability.

Power Factor Correction

Every electric machine needs active power (kW) and reactive power (kvar) to operate. The power rating of the installation in kVA is the combination of both: $(\text{kVA})^2 = (\text{kW})^2 + (\text{kvar})^2$.

The Power Factor has been defined as the ratio of active power (kW) to apparent power (kVA). Power Factor = $(\text{kW}) / (\text{kVA})$.

The objective of Reactive Energy management is improvement of Power Factor, or "Power Factor Correction".

This is typically achieved by producing reactive energy close to the consuming loads, through connection of capacitor banks to the network.

Quality and Reliability

- Advanced impregnation technology ensures the stability of paraffin fill-in: reliable lifecycle.
- 100% testing in manufacturing plant.
- Design and engineering with the highest international standards.

Safety

- Explosion-proof equipment, and quick disconnection from power grid;
- No risk of oil leakage due to the application of microcrystalline wax as impregnation.

Efficiency and Productivity

- Product development including innovation in ergonomics and ease of installation and connection.
- Specially designed components to save time on installation and maintenance.

A Comprehensive Offer

Power Factor Correction capacitor with and without reactor form part of a comprehensive offer of products perfectly coordinated to meet low-voltage power distribution needs.

Use of these products in the electrical installation will result in:

- Improved continuity of service;
- Reduced power losses;
- Guarantee of scalability;
- efficient monitoring and management.

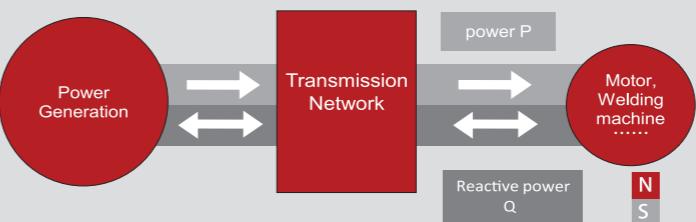

Reactive Power Management: Why?

All AC electrical networks consume two types of power:
active power (kW) and reactive power (kvar):

- The active power P (in kW) is the real power transmitted to loads such as motors, lamps, heaters, computers, etc. The electrical active power is transformed into mechanical power, heat or light.
- The reactive power Q (in kvar) is used only to power the magnetic circuits of machines, motors and transformers.

The apparent power S (in kVA) is the vector combination of active and reactive power.

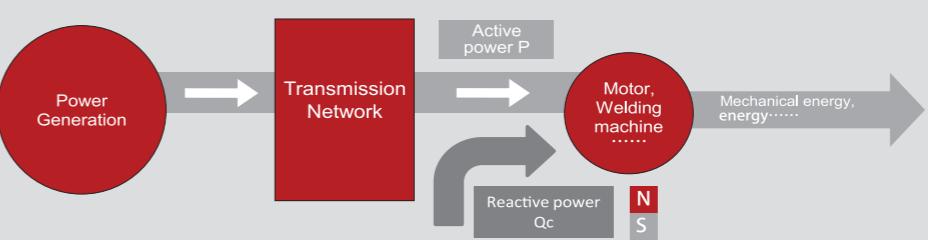

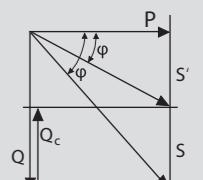

In an electrical circuit, the reactive energy is supplied in addition to the active energy.

For these reasons, there is a great advantage in generating reactive energy at the load level in order to prevent the unnecessary circulation of current in the network. This is what is known as "power factor correction". This is obtained by the connection of capacitors, which produce reactive energy in opposition to the energy absorbed by loads such as motors.

The result is a reduced apparent power, and an improved power factor P/S' as illustrated in the diagram opposite.

The power generation and transmission networks are partially relieved, reducing power losses and making additional transmission capacity available.

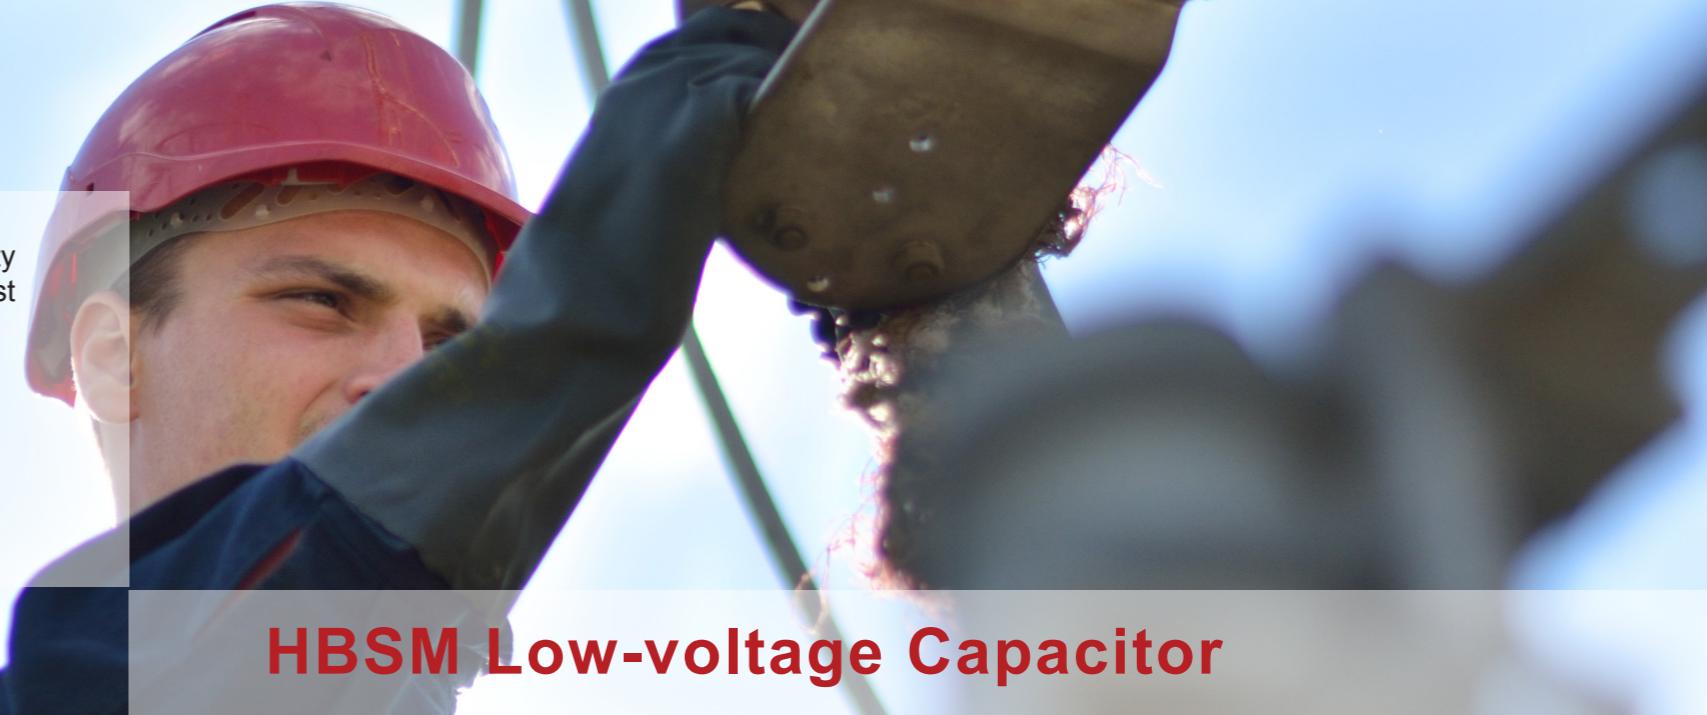

Low-voltage Capacitor

The efficiency of power generation, transmission or conversion is improved when operated at near unity power factor. The least expensive way to achieve the same is by installing Capacitors. Capacitors must be able to withstand high voltage transients and power line variations without breakdown.

Characteristic

- Low loss of medium and temperature with long serving time to save electricity bill.
- HIMEL Capacitors are made in accordance with Metallized Polypropylene technology with built-in SELF HEALING properties.
- Full specifications

HBSM Low-voltage Capacitor

HDCAP3 Series

Capacity: 1~30kvar
Voltage: 230V, 400V, 450V, 525V
Connection type: Three-phase
Voltage: 230V, 400V, 450V, 525V
Connection type: Three-phase

HBSM Series

Capacity: 0.5~60kvar
Voltage: 230V, 250V, 280V, 400V, 415V, 440V, 450V, 480V, 525V, 660V, 690V, 760V
Connection type: Single-phase, three-phase, three-phase four-wire
Housing type: D, M and Q

Single-phase D Type

Three-phase D Type

Three-phase Four-wire D Type

Three-phase M Type

Three-phase Four-wire Q Type

Three-phase Four-wire M Type

Our benefits:

- Small size and light weight, which make a higher compensation accuracy for a system;
- Full-scale specifications: 13 kinds of rated voltage, 3 types of compensation method (single-phase, three-phase delta connection and three-phase four-wire connection), wide range of compensation capacity;
- Built-in reactor structure can be optional for better current suppression function;
- Long-term testing of 2xUn thousands of charges and discharges with inductance.

Technical Characteristics

Basic Information

Rated Voltage(AC)	230V,250V,280V,400V,415V,440V,450V,480V,525V, 660V,690V,760V
Rated Capacity	0.5~60kvar
Capacity deviation (μ F)	0~+10% of the rated capacity
Loss angle tangent (tan)	At the rated power-frequency voltage, 20°C $\tan \delta \leqslant 0.2\%$
Connection Type	Single-phase, three-phase, three-phase four-wire
Rated Frequency	50Hz
Ambient Temperature	-25°C ~+50°C
AC withstand voltage	Inter-electrode: $2.15\text{U}_n/10s$ Between shell and phase: $3\text{kV}/10s$
Allowable over-voltage (U_n)	1.10 of rated voltage (not greater than 8h in 24h)
Allowable over-current (I_n)	1.43 of rated current
Voltage to the ground (U_e)	3000V AC 50Hz
Altitude	$\leqslant 2000m$
Relative humidity	$\leqslant 50\%$ at 40°C $\leqslant 90\%$ at 20°C

Structure Feature

Appearance	Box
Inside Dipping Material	Polypropylene metallized film
Self discharge characteristic	The residual voltage reduces to 50V or below from $\sqrt{2}\text{U}_n$ after 3 minutes in case of power failure
Standard	IEC60831

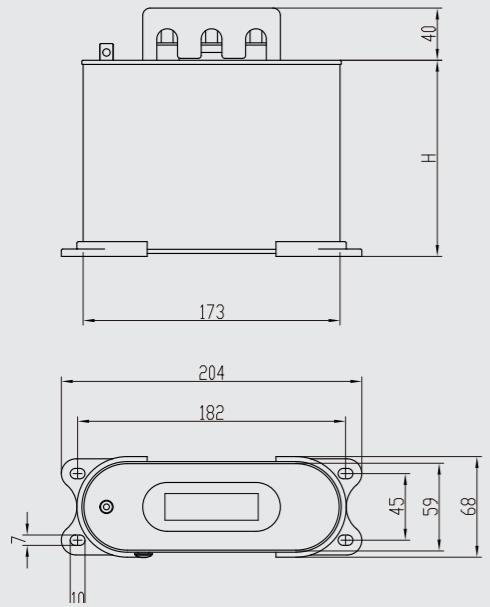

Working conditions and installation conditions

- □ • Environmental condition: no harmful gas and steam, no conductive and explosive dust, no violent mechanical vibration;
- □ • Installation position: vertical; the inclination at each direction does not exceed 10°.

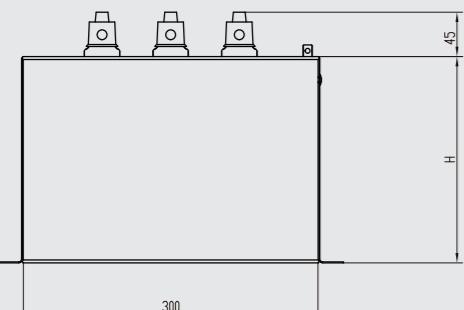

HBSM Low-voltage Capacitor

HBSM Selection Guide

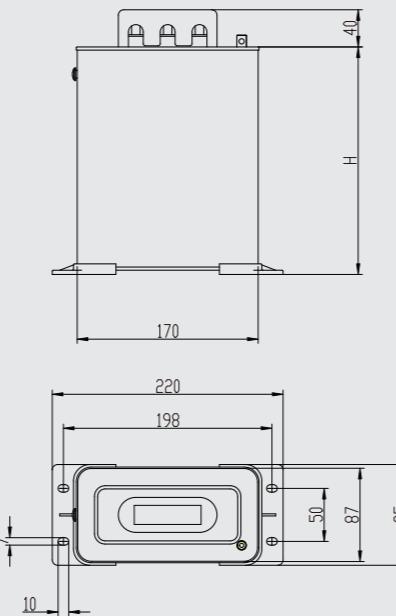

- Overall Dimensions for D, M and Q Type

	D Type					Unit: mm
Housing code	D130	D185	D210	D245	D290	
Capacitor body length x width	173 x 59					
Capacitor body height (H)	130	185	210	245	290	
Max. height	170	225	250	285	330	
Mounting hole size	See Figure					

	Q Type		Unit: mm
Housing code	Q210	Q240	
Capacitor body length x width	300 x 120		
Capacitor body height (H)	210	240	
Max. height	255	285	
Mounting hole size	See Figure		

	M Type	Unit: mm
Housing code	M210	M265
Capacitor body length x width	170 x 87	
Capacitor body height (H)	210	265
Max. height	250	305
Mounting hole size	See Figure

Note: D290 can be replaced with M210, which depends on the actual installation requirement.

- HBSM - Construction of references Principle

Product Name	With or Without reactor	Rated voltage	Rated compensation capacity	Compensation method	Housing type
HBSM	0	04500	0150	3	D
	0: Without reactor	02300: 230V	0005: 0.5kvar	1: Single-phase compensation	D: D type
	1: With reactor	02500: 250V	...		M: M type
		02800: 280V	0075: 7.5kvar		Q: Q type
		04000: 400V	...		
		04150: 415V	0100: 10kvar	3: Three-phase compensation	
		04400: 440V	...		
		04500: 450V	0150: 15kvar	4: Three-phase four-wire compensation 3YN	
		04800: 480V	...		
		05250: 525V	0200: 20kvar		
		06900: 690V	...		
		07500: 750V	0300: 30kvar		
		02303: 230√3V	...		
		02503: 250√3V	0400: 40kvar		
		02803: 280√3V	...		
		04003: 400√3V	0600: 60kvar		

Note: If there is a detuned reactor connected in series with capacitor, you should choose capacitor without reactor type! Two reactors including built-in reactor will affect the total inductance in corresponding loop.

HDCAP3 Low-voltage Capacitor

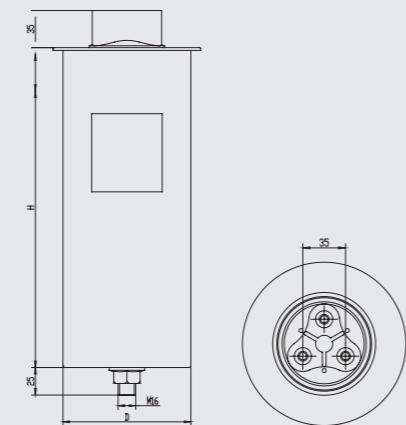

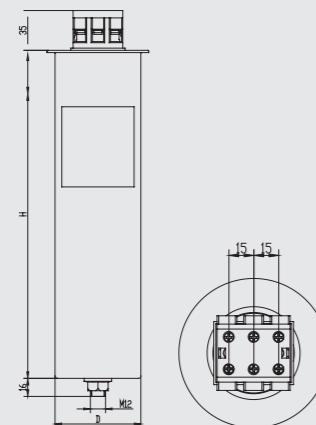

• Technical Characteristics

Basic Information	
Rated Voltage(AC)	400V, 450V, 525V
Rated Capacity	1~30kvar
Capacity deviation (μF)	0~+10% of the rated capacity
Loss angle tangent ($\tan \delta$)	At the rated power-frequency voltage, $20^\circ\text{C} \tan \delta \leq 0.2\%$
Connection Type	Three-phase
Rated Frequency	50Hz
Ambient Temperature	-25°C ~+50°C
AC withstand voltage	Inter-electrode: $2.15\text{U}_{\text{n}}/10\text{s}$
	Between shell and phase: $3\text{kV}/10\text{s}$
Allowable over-voltage (U_{n})	1.10 of rated voltage (not greater than 8h in 24h)
Allowable over-current (I_{n})	1.43 of rated current
Altitude	$\leq 2000\text{m}$
Relative humidity	" $\leq 50\%$ at 40°C $\leq 90\%$ at 20°C "
Structure Feature	
Appearance	Cylindrical
Inside Dipping Material	Polypropylene metallized film
Self discharge characteristic	The residual voltage reduces to 50V or below from $\sqrt{2}\text{U}_{\text{n}}$ after 3 minutes in case of power failure
Standard	IEC60831

Note: If the system is under 60Hz, the corresponding data can be checked in the "Frequency conversion" part.

• Product features

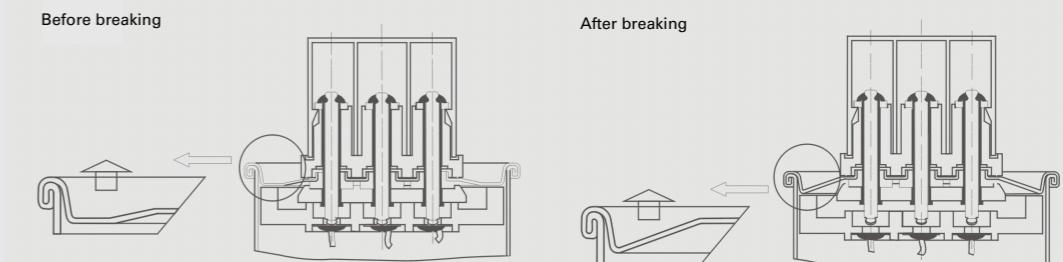

- Aluminum can is used for packaging;
- Impregnant is paraffin wax;
- The pressure separation device and discharge resistor are built in;
- The capacitor packet uses a self-healing high-qualified metallized polypropylene film;
- There is an anti-electric shock terminal block on the top of the capacitor;
- There are M12 or M16 mounting and grounding bolts at the bottom of the capacitor.

Note: If there is a detuned reactor connected in series with capacitor, you should choose capacitor without reactor type! Two reactors including built-in reactor will affect the total inductance in corresponding loop.

Low-voltage Capacitor Selection Guide

Under different situations, compensation capacity selection should be varied. We should consider this issue case by case.

Frequency conversion

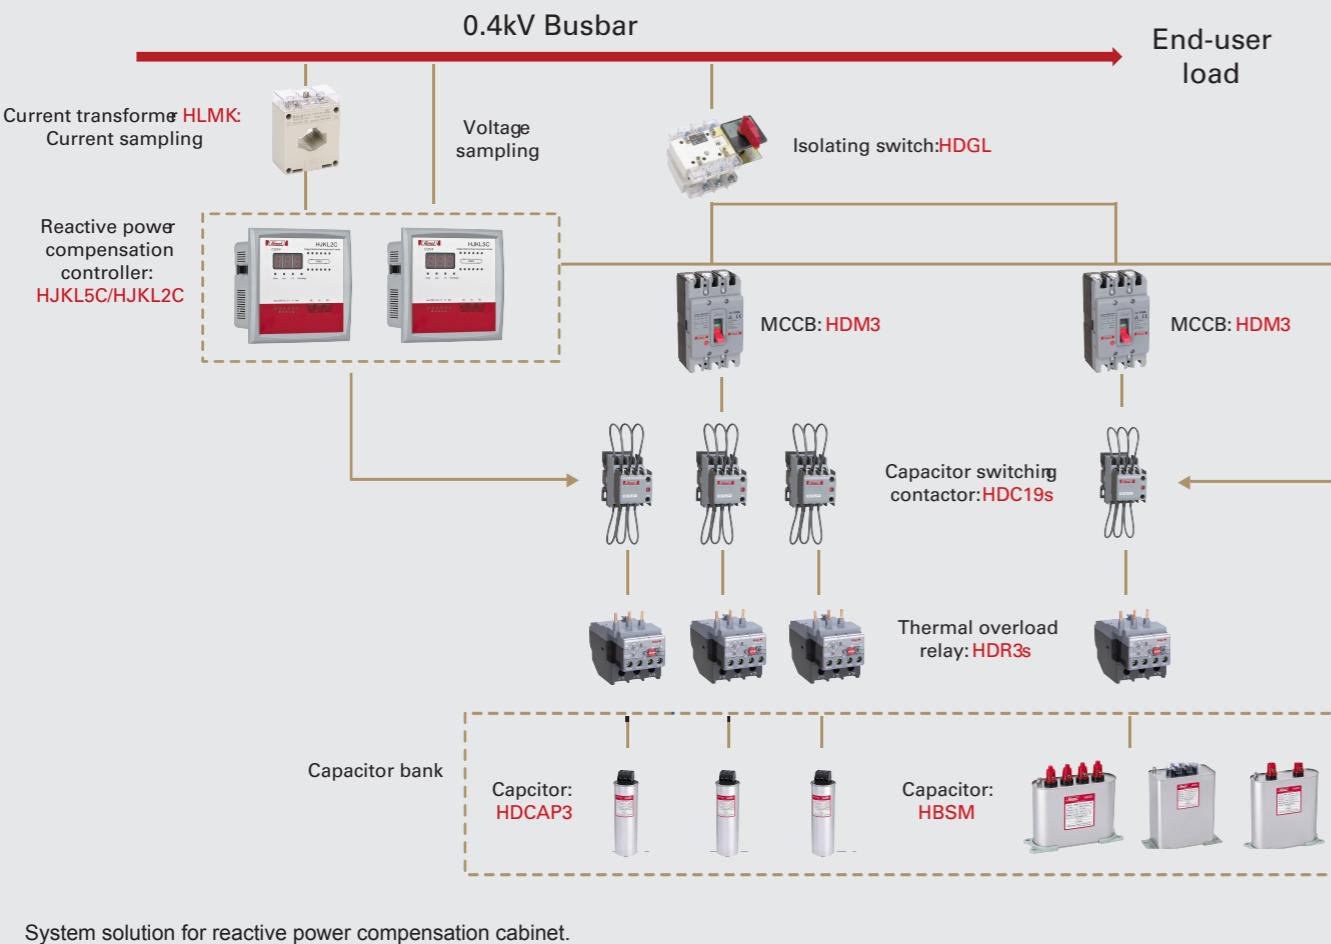

50Hz and 60Hz are available for different countries. Therefore, there is a guideline for customers to choose correct compensation capacity for their applications.

Power Factor Controller

HJKL5C Series

HJKL2C Series

The Reactive Power Compensation controllers permanently monitor the reactive power of the installation and control the connection and disconnection of capacitor steps in order to obtain the targeted power factor.

Reactive Power Compensation Controller HJKL5C & HJKL2C Series

Performance

- Permanent monitoring of the network and equipment
- Information provided about equipment status.
- New control algorithm designed to reduce the number of switching operations and quickly attain the targeted power factor.

Simplicity

- Simplified programming and possibility of intelligent self set-up.
- Ergonomic layout of control buttons.
- Quick and simple mounting and wiring.
- A special menu allows controller self-configuration.

User-friendliness

- Direct viewing of installation electrical information and capacitor stage condition.
- Direct reading of set-up configuration.
- Alarm indication.

Function

The reactive power compensation controller is a specified controller that can match all kinds of capacitors in low-voltage system. It adopts MCU controlling and uses numerical techniques to compute the phase difference between the fundamentals of current and voltage, enabling precise power factor measurement with quick response.

Technical Characteristics

Category	Parameter value	Default Value
Sampling voltage	380V(HJKL5C)/ 220V(HJKL2C)±15%	
Sampling current	n/5A (Is≤5A)	
Frequency	50~60(Hz)	
Sensitivity	50mA	
Input threshold	lag 0.80~lead-0.82 adjustable step 0.01	0.95
Cut-off threshold	lead-0.80 ~lag 0.82 adjustable step 0.01	Technical Characteristics
Loop setting	1~12 adjustable step 1	
Time setting	1s~120s adjustable step 1s	30s
Overvoltage setting	400~450V(HJKL5C)adjustable step 5V	430V
	235~260V(HJKL2C)adjustable step 5V	245V
Undervoltage protection	300V(HJKL5C) / 170V(HJKL2C)	
Undercurrent setting	0mA~500mA adjustable step 50mA	200mA (0 is for close)
COSΦ display	Lead & Lag (0.00~0.99) resolution 0.01	
Working methods	Continuous working, circular switching	
Output loops	4, 6, 8, 10, 12 loops	
Capacity of output	Each group 5A, 220V resistive / 3A, 380V resistive	
IP grade	IP30 for cover
