

# Cold shrink cable joint JS-A 12-42 kV

## Application

Cold shrink joint for XLPE-insulated 1-core or 3-core cables with Al or Cu conductor for 12-42 kV.

## Standard

- IEC 60502.4
- GB/T 12706.4

## Features

- Cold shrink joint body is made of liquid silicone rubber with hydrophobic performance and is erosion resistant. High elasticity and ability to shrink ensure powerful and constant active pressure between rubber and cable that can respond to expanding or shrinking cable diameters under load cycle.
- Stress relief cone, insulation and conductive layers are premolded together as one-piece design requiring no installation tools. This resolves issues like poor bonding between separate layers and ensures safe operation.
- Unique multi-layer waterproof structure. Waterproof armoring tape and resin outer jacket solutions are available.

Always select product by insulation diameter.

Structure

### 1. Conductive outer layer

Premolded structure with high quality material for reliable and effective shielding.

### 2. Spiral core

Plastic spiral core with self-locking structure.

### 3. Conductive inner layer

Enough length to cover conductor connector.

### 4. Insulation layer

Premolded with high quality material. No gas bubble or delamination between conductive inner and outer layer.

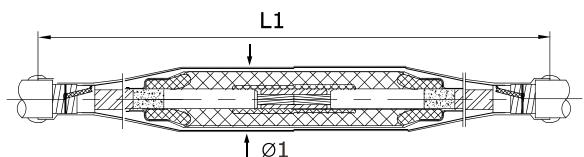

### 5. Geometrical field control unit

The stress cone is premolded in joint body.

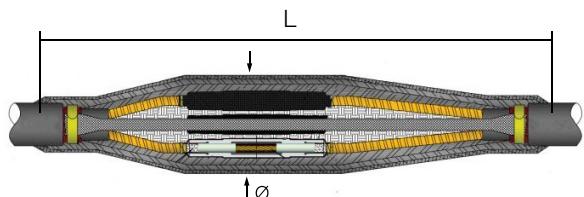

### 6. Metal screen cover unit

The metal screen cover is standard material for joint, and design according the cable insulation diameter.
